Oceanography And Marine Environment In The Basque Country Volume 70 Elsevier Oceanography Series:

Seafloor Geomorphology as Benthic Habitat Peter Harris, Elaine Baker, 2011-11-21 The conservation of marine benthic biodiversity is a recognised goal of a number of national and international programs such as the United Nations Convention on Biodiversity CBD In order to attain this goal information is needed about the distribution of life in the ocean so that spatial conservation measures such as marine protected areas MPAs can be designed to maximise protection within boundaries of acceptable dimensions Ideally a map would be produced that showed the distribution of benthic biodiversity to enable the efficient design of MPAs The dilemma is that such maps do not exist for most areas and it is not possible at present to predict the spatial distribution of all marine life using the sparse biological information currently available Knowledge of the geomorphology and biogeography of the seafloor has improved markedly over the past 10 years Using multibeam sonar the benthic ecology of submarine features such as fjords sand banks coral reefs seamounts canyons mud volcanoes and spreading ridges has been revealed in unprecedented detail This book provides a synthesis of seabed geomorphology and benthic habitats based on the most recent up to date information Introductory chapters explain the drivers that underpin the need for benthic habitat maps including threats to ocean health the habitat mapping approach based on principles of biogeography and benthic ecology and seabed geomorphic classification schemes Case studies from around the world are then presented They represent a range of seabed features where detailed bathymetric maps have been combined with seabed video and sampling to yield an integrated picture of the benthic communities that are associated with different types of benthic habitat The final chapter examines critical knowledge gaps and future directions for benthic habitat mapping research Reviews and compares the different methodologies currently being used Includes global case studies Provides geological expertise into what has traditionally been a biological discipline *The Spanish Coastal Systems* Juan A. Morales, 2018-09-03 This monograph presents the state of art of the geologic knowledge about the Spanish coast obtained through scientific research in the last 30 years From a general point of view coasts are the most quickly changing systems of the Earth This is critical since many human resources such as the main part of economic and social activities are located in the coastal areas Especially in the case of Spain these coasts include cities wide industrial areas including harbor complexes important ecologic systems and our main economic resource tourism Understanding the dynamic functioning of each element of this coast is vital for correct future coastal management so as to solve problems derived from bad plans developed in the last decades of the twentieth century This is a valuable text for advanced graduate students and coastal researchers which connects the specific dynamic functioning of the main Spanish coastal environments and their relationships with human activities World Seas: An Environmental Evaluation Jean-Francois Hamel, 2018-08-24 World Seas An Environmental Evaluation Second Edition Volume One Europe The Americas and West Africa provides a comprehensive review of the environmental condition of the seas of Europe the Americas and West Africa Each chapter is written by experts in the field

who provide historical overviews in environmental terms current environmental status major problems arising from human use informed comments on major trends problems and successes and recommendations for the future The book is an invaluable worldwide reference source for students and researchers who are concerned with marine environmental science fisheries oceanography and engineering and coastal zone development Covers regional issues that help countries find solutions to environmental decline that may have already developed elsewhere Provides scientific reviews of regional issues thus empowering managers and policymakers to make progress in under resourced countries and regions Includes comprehensive maps and updated statistics in each region covered

Oceanography and Marine Environment in the Basque Country A. Borja, M. Collins, 2004-03-03 Against a background of extensive multi disciplinary oceanographic investigations over a number of years together with the long term establishment of a Society and Institute extensive information is available from studies undertaken in the estuarine and coastal waters of the Basque Country The present authors gained access to unpublished literature and reports which together with a synthesis of internationally refereed papers provide a series of scientific overviews of particular subject areas Teams of researchers from Basque Institutes and Universities combine to present the present state of knowledge within a global context of processes ranging from sub seabed to air sea interaction incorporating data on the associated biology including fisheries and pollutant sources and levels The latter are compared with regional national and European legislation The volume is divided into various sections Introduction Geography and Oceanography Chemical Oceanography and Water Quality Sediment Characteristics Quality and Chemistry Biomonitoring Communities and Ecology and Overall Assessment The topics covered include an historical review of marine research the impact of human activities during past centuries geology geomorphology and sediments climate and meteorology marine dynamics hydrography water mass characteristics contaminants in the waters microbiological quality sedimentological characteristics contaminants in sediments biomonitoring of heavy metals and organic components at tissue organism level and using cellular and molecular biomarkers bacterioplankton and phytoplankton communities zooplankton communities benthic communities seabirds biodiversity and conservation recovery of benthic communities the polluted systems and assessment of human impacts On the basis of these syntheses future challenges for marine research in the Basque Country are identified in terms of a Research Agenda This comprehensive text relating to estuarine coastal and oceanographic processes at wide ranging spatial and temporal scales in the southern Bay of Biscay will be of interest to researchers engineers and legislators on a regional basis and within a world wide perspective

Ecological Indicators for Coastal and Estuarine Environmental Assessment João Carlos Marques, 2009 Ecological indicators address ecosystems structure and or function and are commonly used to provide synoptic information about their state Through quantitative representations of either the forces that steer ecosystems responses to forcing functions or of previous current or future states of an ecosystem indicators are expected to reveal conditions and trends that will help in development planning and

decision making processes Ecological indicators combine numerous environmental factors in a single value which may be useful in terms of management and in the development of ecological concepts compliant with the general public's understanding Nevertheless their application is not exempt of criticisms the first of which is that aggregation results in an oversimplification of the ecosystem under observation Ecological indicators must therefore be handled following the right criteria and in situations that are consistent with its intended use and scope otherwise they may drive to confusing interpretations of data

Coastal Wetlands: Alteration and Remediation Charles W. Finkl, Christopher Makowski, 2017-07-18 This book delves into human induced and natural impacts on coastal wetlands intended or otherwise through a series of vignettes that elucidate the environmental insults and efforts at amelioration and remediation The alteration and subsequent restoration of wetland habitats remain key issues among coastal scientists These topics are introduced through case studies and pilot programs that are designed to better understand the best practices of trying to save what is left of these fragile ecosystems Local approaches as well as national and international efforts to restore the functionality of marsh systems are summarily approached and evaluated by their efficacy in producing resilient reclamations in terms of climate smart habitat conservation The outlook of this work is global in extent and local by intent Included here in summarized form are professional opinions of experts in the field that investigate the crux of the matter which proves to be human pressure on coastal wetland environments Even though conservation and preservation of these delicate environmental systems may be coming at a later date many multi pronged approaches show promise through advances in education litigation and engineering to achieve sustainable coastal systems The examples in this book are not only of interest to those working exclusively with coastal wetlands but also to those working to protect the surrounding coastal areas of all types

Physical Oceanography of the Frontal Zones in Sub-Arctic Seas A.G. Kostianoy, J.C.J. Nihoul, V.B. Rodionov, 2004-12-16 This title presents the systematization and description of accumulated knowledge on oceanic fronts of the Norwegian Greenland Barents and Bering Seas The main fronts of the Norwegian Greenland and Barents Seas are part of the climatic North Polar Frontal Zone NPFZ The work is based on numerous observational data collected by the authors during special sea experiments directed at the investigation of physical processes and phenomena inside certain parts of the NPFZ and in the northern part of the Bering Sea on archive data of the USSR Hydrometeocenter and other research institutions as well as on a wide scientific literature published in Russian and Western editions The book contains general information on the oceanic fronts of the Subarctic Seas brief history of their investigation state of the knowledge as well as detailed description of the thermohaline structure of all frontal zones in the Norwegian Greenland Barents and Bering Seas and of neighboring fronts of Arctic and coastal origin Special attention is given to the study of the multifrontal character of the NPFZ and of peculiarities of its internal structure at different locations to the description of diverse oceanic features observed in the NPFZ as well as to some characteristics of the horizontal and vertical fine structure of hydrophysical fields in

the NPFZ The main features of the northern Bering Sea's summer ecohydrodynamics are investigated with the help of three dimensional direct and inverse models *Application of Remote Sensing in Coastal Oceanic Processes* Lei Ren, Michael Hartnett, Xiaoteng Shen, Qing Xu, 2024-06-05 Remote sensing technology is a key technology and an important tool to help realize the sustainable development of marine resources and the environment Remote sensing is playing an increasing role in global change research resource investigation environmental monitoring and prediction In the process of maintaining the sustainable development of marine resources and the environment remote sensing technology will not only greatly promote the development of information science and technology space science and technology environmental science and technology and earth science but also further promote the intersection and integration of different disciplines Ocean remote sensing technology provides a robust platform for the acquisition of marine basic data and plays a major role in issues such as the construction of new ports the opening of new channels offshore oil exploitation and coastal ecological governance and protection **The Western Arctic Shelf-basin Interactions (SBI) Project**, 2005 **Bridging the Gap Between Policy and Science in Assessing the Health Status of Marine Ecosystems, 2nd Edition** Angel Borja, Michael Elliott, María C. Uyarra, Jacob Carstensen, Marianna Mea, 2017-03-22 Marine management requires approaches which bring together the best research from the natural and social sciences It requires stakeholders to be well informed by science and to work across administrative and geographical boundaries a feature especially important in the inter connected marine environment Marine management must ensure that the natural structure and functioning of ecosystems is maintained to provide ecosystem services Once those marine ecosystem services have been created they deliver societal goods as long as society inputs its skills time money and energy to gather those benefits However if societal goods and benefits are to be limitless society requires appropriate administrative legal and management mechanisms to ensure that the use of such benefits do not impact on environmental quality but instead support its sustainable use **River Discharge to the Coastal Ocean** John D.
