Oceans Participant, Jon Bowermaster, 2010-03-23 This unique tie in to the major motion picture Oceans coming this April from Disney National Geographic explores the health of our oceans and what we can do to improve it More than 75 percent of the globe is covered by the oceans It is sometimes difficult to understand why it is called Planet Earth rather than Planet Ocean Since half the world s human population lives within a stone s throw of an ocean coastline the oceans health is increasingly important Rich with resources and potential as a source of renewable energy new drugs drinking water for years we have treated them as both infinite and undamageable But they are not Over fishing climate change pollution acidification

and more have put the world's oceans and marine life at great risk. Oceans gathers some of the most insightful visionaries, explorers, and ocean lovers, marine biologists, politicians, environmentalists, fishermen, sportsmen, deep divers, and more in a unique anthology in which each speaks to a unique aspect of our world's most dimly understood dimension. Ocean, 2008-07-21. Breathtaking, powerful, and all encompassing in its sheer scope and visual impact, Ocean sweeps you away on an incredible journey into the depths of our astonishing marine world. As the site where life first formed on Earth, a key element of the climate, and a fragile resource, oceans are of vital importance to our planet. This is a definitive visual guide to the world's oceans, including the geological and physical processes that affect the ocean floor, the key habitat zones, the rich diversity of marine life. Oceans, James Fargo Balliett, 2014-12-18. Covering 71 percent of the planet, these saline bodies of water provided the unique conditions necessary for the building blocks of life to form billions of years ago. This book explains how our oceans continue to support and influence life in important ways by providing the largest global source of protein in the form of fish populations, by creating and influencing weather systems, and by absorbing waste streams such as airborne carbon. It is shown how oceans have an almost magnetic draw; almost half of the world's population lives within a few hours of an ocean. Although oceans are vast in size, exceeding 328 million cubic miles (1.37 billion cubic kilometers), they have been influenced by and have influenced humans in numerous ways. The book includes three detailed case studies. The first focuses on the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed twenty thousand feet underwater. The second considers the Maldives, a string of islands in the Indian Ocean where increasing sea levels may force residents to abandon some communities by 2020. The third describes the North Sea at the edge of the Arctic Ocean where fishing stocks have been dangerously depleted as a result of multiple nations' unrelenting removal of the smallest and largest species. Oceans: A Very Short Introduction, Dorrik Stow, 2018-01-25. The importance of the oceans to life on Earth cannot be overstated. Liquid water covers more than 70% of our planet's surface and in past geological time has spread over 85%. Life on Earth began in the oceans over 3.5 billion years ago and remained there for the great majority of that time. Today the seas still provide 99% of habitable living space, the largest repository of biomass, and holds the greatest number of undiscovered species on the planet. Our oceans are vital for the regulation of climate, and with global warming and decreasing land area, they have become increasingly important as the source of food, energy in the form of oil and gas, and for their mineral wealth. Oceans also form a key part of the biogeochemical cycles of carbon, nitrogen, and other elements critical to life. Nutrients in upwelling areas are spread by ocean currents, and the plankton of the seas supports a wealth of wildlife. In this Very Short Introduction, Dorrik Stow analyses these most important components of our blue planet and considers their relationship with and exploitation by humans. He shows how the oceans are an essential resource to our overpopulated world and discusses why exploration and greater scientific understanding of the oceans, their chemistry, and their mineral wealth are now a high priority. Stow also explores what we know of how oceans originate and evolve and change the shape of the

seafloor and nature of its cover the physical processes that stir the waters and mix such a rich chemical broth and the inseparable link between oceans and climate As polar ice melts and sea levels rise countless millions who have made their homes on low lying lands close to the sea are threatened As scientific exploration of the seas gathers pace the new knowledge gained of the ocean Earth systems and their interaction with the human environment is vital to our understanding of how we can preserve these ultimately fragile environments ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Gone Fishing David McLimans, 2008-10-01 Dive down to the depths of our planet's oceans and see the stunning variety of creatures that call this watery environment home These incredible marine animals and their ocean habitats are among our most precious and endangered resources In a dazzling underwater adventure Caldecott Honor winning artist David McLimans uses fins flippers and tentacles to create numerical masterpieces From the smallest tiger tail sea horse to the giant humpback whale this aquatic menagerie will captivate readers of all ages as they count up to ten and back down again McLimans also explores the powers of ten to showcase amazing ocean facts from one to one billion Once you wet your feet with this eye popping visual treat your view of the ocean will be forever transformed

Earth Frank H. T. Rhodes, 2012-06-10 It's impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It's a survival issue This is the only planet we have We're stuck here and we don't own the place it would be the height of arrogance to assume that we do We're tenants here not owners but we're tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant's Manual In *Earth A Tenant's Manual* the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth's livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population He concludes with an extended exploration of humanity's prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is

sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth's processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home

The Paradoxes of Transparency Douglas Clyde Wilson, 2009 The International Council for the Exploration of the Sea ICES is the central scientific network within the massive set of bureaucracies that is responsible for Europe's Common Fisheries Policy CFP While spending the past 25 years failing to sustain Europe's fish stocks this management system also became adept at making the lives of its scientists miserable Now it is being confronted by the complex challenge of an ecosystem based approach to fisheries management If this combination of a multi national bureaucracy hard politics and scientific uncertainty has made it impossible to maintain many individual fish stocks how are decisions going to be made that consider everything from sea birds to climate change The old political saw that if you can't solve a problem make it bigger has never been put to a test like this Yet ICES has begun to rise in an impressive way to the scientific challenge of providing advice for an ecosystem approach within the world's most cumbersome fisheries management system This book lays out the results of extensive sociological research on ICES and the decision making systems into which it feeds ICES is finding ways to provide effective advice in the many situations where scientific advice is needed but a clear simple answer is out of reach In spite of the difficulties scientists are beginning to help the various parties concerned with management to deal with facts about nature in ways that are more useful and transparent

Publisher's description *Under a Black Cloud* Frank Spalding, 2009-01-15 The defining challenge of the twenty first century for the entire world may very well be the health of our atmosphere both the delicate balance of gases in its upper reaches and the air we breathe at ground level Increases in carbon dioxide and other greenhouse gases appear to be resulting in rapid and possibly catastrophic global warming and climate change Pollution at lower altitudes caused by such things as car exhaust and industrial emissions is causing the destruction of flora and fauna as well as health problems in humans The invisible element that we draw deeply into our lungs about 17 000 times a day may be poisoning us now that we have poisoned it The future of life on earth may be in real peril This hard hitting book spells out exactly the state we're in where we're headed and what can be done to insure that conditions do not worsen for future generations
