Oceanography Of The East Sea Japan Sea:

Oceanography of the East Sea (Japan Sea) Kyung-Il Chang, Chang-Ik Zhang, Chul Park, Dong-Jin Kang, Se-Jong Ju, Sang-Hoon Lee, Mark Wimbush, 2015-09-15 This book reviews the research in various fields of oceanography on the responses of the East Japan Sea to climate change The uniqueness of the East Japan Sea comes from the rapid and amplified response to climate change which includes long terms trends of physical and chemical parameters at a rate that almost doubles or even higher the global rate This book aims to provide in an organized way the results from the previously published knowledge but also to introduce an updated view of the research recently carried out The book is divided into several parts that comprise the physical chemical biological and geological aspects of the region and fisheries This book is made for researchers and students working on climate variability as well as for the oceanography community working on world s marginal seas The research presented in this work will also benefit to researchers from other fields such as social scientists and environmentalists and also policy makers

Bibliography of the Oceanography of the Japan/East Sea Mikhail A. Danchenkov, 2000 The Oceanography of the Japan/East Sea, 1996 The Japan Sea known as the East Sea in Korea covers an area of 106 km² has a maximum depth in excess of 3700 m and is one of the four marginal seas of the North Pacific Ocean The circulation of the Japan East Sea hereafter JES has been studied for nearly a century by scientists from Japan Korea and Russia While this legacy of exploration has left us with some zeroth order notions about the properties of the general circulation of the JES the most basic questions concerning the JES circulation remain largely unanswered In recent years a new climate of scientific cooperation among the nations bordering the JES has resulted in significant advances in our knowledge of the circulation of the JES It is clear moreover that the JES harbors a rich variety of physical phenomena including wind and buoyancy driven effects sea ice processes western boundary currents fronts mesoscale eddies topographic effects flow through narrow straits deep convection and many others Thus it is conjectured that beyond the obvious economic and environmental importance of the JES to the countries bordering the Sea the JES might potentially serve as an important laboratory for examining many physical processes that are ubiquitous in other marginal seas and the global ocean

Oceanography of Asian Marginal Seas K. Takano, 1991-06-06 This volume contains 31 papers on physical and geological oceanography marine engineering and meteorology in the Japan Sea and the East China Sea Almost all these papers were presented at the Fifth JECSS Japan and East China Seas Study Workshop held in Korea in 1989 Results of multinational cooperative studies carried out since the initiation of JECSS in 1981 are presented Authors are from China Japan Korea UK USA and USSR A wide range of subjects are covered from the viewpoint of various disciplines The status of recent research on Asian marginal seas is outlined and points at issue are defined An important aspect is the coverage of results from the USSR and China which are not normally easily accessible to scientists in other countries despite the importance of this research to the international scientific community Various subjects from estuaries to the problems related

to the whole north Pacific are covered in this book and it is recommended to scientists in coastal oceanography environmental oceanography mesoscale synoptic scale oceanography and large scale oceanography *Physics and Biogeochemistry of the East Asian Marginal Seas* SungHyun Nam,Ying Wu,Jeomshik Hwang,Ryan Rykaczewski,Guebuem Kim,2022-11-08 Physical Oceanography Processes at Eastern Boundary Upwelling Systems Francisco Machin,Jose Gomez-Valdes,2023-12-29 Eastern boundary upwelling systems EBUS have historically received attention from the scientific community due to their impact on the economic development of these highly productive systems Remote sensing numerical modeling and in situ observations have increased their spatial and temporal resolutions during the last 40 years in their strategy to provide reliable products about the actual state of the ocean The assembly of several data sources currently constitutes an opportunity to increase our knowledge about the present and future state of the relatively narrow and highly variable EBUS The primary forcing mechanism in the upwelling regions is the wind stress in areas close to the coast Long term trends in wind intensity in upwelling areas present considerable uncertainties as the different wind databases produce divergent results On the other hand although the effect of climate change in the interior ocean is increasing temperatures in upwelling areas the long term trends seem to be in the opposite direction Hence assessing the long term impact of the environmental conditions on upwelling development represents a major challenge for the scientific community This special issue aims to discuss the state of the art understanding of dynamical processes governing the ocean at the eastern boundary upwelling systems in a changing ocean *Special Issue on the Japan/East Sea* ,2006 *Advances in sea state modeling and climate change impacts* Adem Akpınar,Giovanni Besio,Bahareh Kamranzad,2023-04-04 *Changing Asia-Pacific Marginal Seas* Chen-Tung Arthur Chen,Xinyu Guo,2020-06-15 This book discusses temporal changes in six Asia Pacific marginal seas and two west boundary currents in the Northwest Pacific Covering time scales varying from years to decades it provides a comprehensive review of the long term changes in various physical variables including sea level sea surface temperature water mass index current and transport as well as local issues such as sea ice and tidal mixing and the processes and dynamics that govern them The book also examines biogeochemical variables such as nutrients oxygen pH water transparency ocean acidification eutrophication and productivity and explores future trends Offering a holistic view of the changes that have occurred in the Asia Pacific marginal seas and those that are likely to occur in the future this book will appeal to readers from all fields of oceanography *Remote Sensing of the Asian Seas* Vittorio Barale,Martin Gade,2018-09-07 A wide variety of marginal basins ranging from polar to equatorial regions and a few sizeable enclosed basins can all be included among the Asian Seas The Arctic Ocean shelf seas off Siberia the sheltered basins along the Pacific Ocean s western rim the coastal seas of the northernmost Indian Ocean including the semi enclosed Red Sea and Persian Gulf the Caspian Sea the remnants of the Aral Sea and a score of brackish or freshwater lakes such as Lake Balkhash and Lake Baykal all exhibit a multiplicity of environmental features and processes Understanding the peculiarities of such a large

and varied collection of marine and coastal types requires integrated observation systems among which orbital remote sensing must play an essential role This volume reviews the current potential of Earth Observations in assessing the many Asian seascapes using both passive and active techniques in diverse spectral regions such as measuring reflected visible and near infrared sunlight and surface emissions in the thermal infrared and microwave range or surface reflection of transmitted radar pulses in the microwave range An in depth evaluation of the available spectral regions and observation techniques as well as of novel multi technique methods ensures that suitable tools are indeed accessible for exploring and managing the wealth of resources that the Asian Seas have to offer

Coastal Altimetry Stefano Vignudelli, Nurul Hazrina Idris, 2023-06-27 Coastal Altimetry Selected Case Studies from Asian Shelf Seas provides information on developments over the past decade in the processing of remotely sensed altimetry in coastal areas with an overview of expected errors and where they stem from along with remaining gaps in processing Challenges covered include the retracking of the altimetric signal to account for land contamination tropospheric water corrections and tidal model improvements along with the pros and cons of widely available products Additional chapters provide recent research in the regional seas of Asia and cover variability dynamics predictability and prediction impacts of extreme events effects to ecosystems and more This book offers readers a dataset that can illuminate our understanding of the propagation of planetary boundary waves that have a significant sea level signal in near coastal regions As such researchers and students who have a foundation in satellite altimetry and want to know the latest development of open ocean and coastal satellite altimetry especially in Asian coastal regions will benefit from this book Presents the advancement of coastal altimetry technologies from various dedicated experts Includes case studies throughout to give real life examples that can be implemented globally Provides chapters that include summaries of key points and an outlook to the future
