**of Life** Michal Kurzynski, 2006-07-09 Thermodynamics was created in the first half of the 19th century as a theory designed to explain the functioning of heat engines converting heat into mechanical work. In the course of time while the scope of research in this field was being extended to a wider and wider class of energy transformations thermodynamics came to be considered as a general theory of machines identified with energy transducers. Important progress in biochemistry in the first half of the 20th century and in molecular biology in the second half made it possible to think of treating even living organisms as machines at least on the subcellular level. However success in applying thermodynamics to elucidate the phenomenon of life has been rather mitigated. Two reasons seem to be responsible for this unsatisfactory situation. Nineteenth century thermodynamics dealt only with simple homogeneous systems in complete equilibrium. Although during the 20th century a nonequilibrium thermodynamics was developed starting with the Onsager theory of linear response and ending with the Prigogine nonlinear theory of dissipative structures these theories still concern the originally homogeneous systems. Because living organisms are complex systems with a historically frozen spatial and functional structure a thermodynamics of both nonequilibrium and complex systems is needed for their description. The first goal of the present book is to formulate the foundations of such a thermodynamics. *Index to Course Handbooks*, 2002 **Journal of the Society of Glass**

In early 2020 the American economy was roaring. Unemployment was historically low and small business optimism was on the rise. And then the coronavirus changed everything. Lockdowns massive unemployment claims and small business closures spread throughout the country. Those who could do so worked from their homes virtually educating their children and trying to maintain some sense of normalcy for their families. All they could do was watch the news as the media reported that millions of Americans were infected with the virus and that many would ultimately lose their lives to complications associated with the disease. Along Main Streets across the country the dreams of countless entrepreneurs faced permanent ruin. Their hopes hung in the balance in the halls of Congress and within the walls of the Oval Office. The CARES Act was passed and signed into law in March 2020 with a price tag of over 2 trillion. Small businesses and their workers relied on various programs including the now famed Paycheck Protection Program which ultimately sought to inject 800 billion into the US
