Operations Research in Space and Air Tito A. Ciriani, G. Fasano, S. Gliozzi, Roberto Tadei, 2013-04-18 Operations Research in Space and Air is a selection of papers reflecting the experience and expertise of international OR consulting companies and academic groups. The global market and competition play a crucial part in the decision making processes within the Space and Air industries and this book gives practical examples of how advanced applications can be used by Space and Air industry management. The material within the book provides both the basic background for the novice modeler and a useful reference for experienced modelers. Students, researchers, and OR practitioners will appreciate the details of the modeling techniques, the processes that have been implemented, and the computational results that demonstrate the benefits in applying OR in the Space and Airline industries. Advances in PC and Workstations technology in optimization engines and in modeling techniques now enable solving problems never before attained by Operations Research. In recent years the Italian OR Society AfRO www.airo.org has organized annual forums for researchers and practitioners to meet together to present and discuss the various scientific and technical OR achievements. The OR in Space & Air session of AfRO2001 and AfRO2002 Conferences together with optimization tools applications presented recent results achieved by Alenia Spazio S.p.A. Turin, Alitalia, Milan Polytechnic, and Turin Polytechnic. With additional contributions from academia and industry they have enabled us to capture in print today's state of the art optimization and data mining solutions. **Aeronautics and Space**
