*Actionable Performance Measurement* Marvin T. Howell, 2005-06-30. Measurement is absolutely essential for any organization or company, functional area, department, business unit, project or individual. Companies must know how their processes are performing, how well they are meeting customers' needs, how targeted improvements are being achieved and how management is doing. Accurate performance measures tell companies where they are and to take action if they are not on track or if performance does not meet expectations. Actionable Performance Measurement presents many different methods to help readers develop metrics and performance measures. To aid in corporate measures development and strategic, tactical and/or business planning, a quick and effective method of identifying specific key results areas is outlined and explained. Both customer and employee focuses are presented, how to measure each and how to develop good surveys. In addition, Howell explains several methods for setting realistic but stretch targets as well as a technique for measuring apples and oranges. Readers will be able to measure employee and customer satisfaction and be prepared to capably lead or be a member of a corporate or business unit measurement team to assess existing performance indicators' effectiveness. Included is a student workbook to be used as a teaching tool in conjunction with the book.

Transforming Performance Measurement Dean R. Spitzer, 2007. You can't improve performance in an organization without measurement, but how you measure matters. Traditional measurement systems can create dysfunction and distrust. This breakthrough approach provides an alternative, a roadmap for moving with little or no disruption toward a more mature, effective and transformative measurement system.

Designing Performance Measurement Systems Fiorenzo Franceschini, Maurizio Galetto, Domenico Maisano, 2018-11-23. Given our rapidly changing world, companies are virtually forced to engage in continuous performance monitoring. Though Key Performance Indicators (KPIs) may at times seem to be the real driving force behind social systems, economies and organizations, they can also have far-reaching normative effects which can modify organizational behavior and influence key decisions, even to the point that organizations themselves tend to become what they measure. Selecting the right performance indicators is hardly a simple undertaking. This book describes in detail the main characteristics of performance measurement systems and summarizes practical methods for defining KPIs, combining theoretical and practical aspects. These descriptions are supported by a wealth of practical examples. The book is intended for all academics.

*Questioning Performance Measurement: Metrics, Organizations and Power* Guy Redden, 2019-03-11 Questioning Performance Measurement Metrics Organizations and Power is the first book to interrogate the organizational turn towards performance metrics critically Performance measurement is used to evaluate a diverse range of activities throughout the private public and non governmental sectors But in an increasingly data driven world what does it really mean to measure performance Taking a sociology of quantification perspective this book traces the rise of performance measurement questions its methods and objectivity and examines the social significance of the flood of numbers through which value is represented and actors are held accountable An illuminating read for students scholars and practitioners across Organization Studies Sociology Business and Management Public Policy and Administration      **Intelligent Non-hierarchical Manufacturing Networks** Raul Poler, Luis Maia Carneiro, Thomas Jasinski, Marc Zolghadri, Paolo Pedrazzoli, 2013-02-05 This book provides the latest models methods and guidelines for networked enterprises to enhance their competitiveness and move towards innovative high performance and agile industrial systems In the new global market competitiveness and economic growth rely greatly on the move toward innovative high performance industrial systems and agile networked enterprises through the creation and consolidation of non hierarchical manufacturing networks of multi national SMEs as opposed to networks based on powerful large scale companies Network performance can be significantly improved through more harmonious and equitable peer to peer inter enterprise relationships conforming decentralized and collaborative decision making models Traditional hierarchical manufacturing networks are based on centralized models where some of the

actors involved must adapt themselves to the constraints defined by those who are most dominant. Real world experiences of such models have revealed some major problems due to the centralized vision of the supply chain and the sub optimal performance of centralized decision making. For the current highly dynamic markets this generates major inefficiencies in operation throughout the supply chain. This book collects the latest research regarding non hierarchical manufacturing networks and provides enterprises with valuable models, methods and guidelines to improve their competitiveness.

*Productivity Improvement in Manufacturing SMEs* Thomas Thinandavha Munyai, Boysana Lephoi Mbonyane, Charles Mbohwa, 2017-12-12. This book focuses on the application of workstudy in productivity of manufacturing SMEs locally and abroad and also explores various industrial problems which face manufacturing SMEs in developing and underdeveloped countries in the rest of the world. Low productivity is currently a serious challenge facing manufacturing SMEs where these SMEs are operating below expected production output levels which makes it difficult for them to compete in the global market. SMEs are the engine drivers of economic growth, one of which is manufacturing. The challenge is that government from various countries in developing and underdeveloped countries mandated agencies in their respective areas to ensure that there is economic progress for these SMEs but productivity remains low in the manufacturing SMEs. When SMEs do not perform well, productivity of manufacturing SMEs declines and unemployment increases. Thus an increase in unemployment results in a drop of GDP in the country and can become a global and economic crisis. This book describes a process which enables the reader to use effective knowledge that addresses problems facing the productivity of manufacturing SMEs such as work study tools and case studies and provides solutions and applications to improve the running of the manufacturing SMEs in growing their productivity.
