Competing on Supply Chain Quality Anna Nagurney,Dong Li,2016-05-30 This book lays the foundations for quality modeling and analysis in the context of supply chains through a synthesis of the economics operations management as well as operations research management science literature on quality The reality of today s supply chain networks given their global reach from sourcing locations to points of demand is further challenged by such issues as the growth in outsourcing as well as the information asymmetry associated with what producers know about the quality of their products and what consumers know Although much of the related literature has focused on the micro aspects of supply chain networks considering two or three decision makers it is essential to capture the scale of supply chain networks in a holistic manner that occurs in practice in order to be able to evaluate and analyze the competition and the impacts on supply chain quality in a quantifiable manner This volume provides an overview of the fundamental methodologies utilized in this book including optimization theory game theory variational inequality theory and projected dynamical systems theory It then focuses on major issues in today s supply chains with respect to quality beginning with

information asymmetry followed by product differentiation and branding the outsourcing of production from components to final products to quality in freight service provision The book is filled with numerous real life examples in order to emphasize the generality and pragmatism of the models and tools The novelty of the framework lies in a network economics perspective through which the authors identify the underlying network structure of the various supply chains coupled with the behavior of the decision makers ranging from suppliers and manufacturers to freight service providers What is meant by quality is rigorously defined and quantified The authors explore the underlying dynamics associated with the competitive processes along with the equilibrium solutions As appropriate the supply chain decision makers compete in terms of quantity and quality or in price and quality The relevance of the various models that are developed to specific industrial sectors including pharmaceuticals and high technology products is clearly made Qualitative analyses are provided along with effective and easy to implement computational procedures Finally the impacts of policy interventions in the form of minimum quality standards and their ramifications in terms of product prices quality levels as well as profits are explored The book is filled with many network figures graphs and tables with data *Rapid Results!* Robert H. Schaffer, Ronald N. Ashkenas, 2011-01-13

Rapid Results shows how to make large scale changes succeed by using 100 day results producing projects to develop this vital implementation capability Written by Robert H Schaffer Ronald N Ashkenas and their associates leaders in the field of change management *Rapid Results* describes an approach that has been field tested by real organizations of every size and description to improve performance and speed the pace of change *Rapid results* projects produce results quickly introduce new work patterns and enable participants to learn a variety of lessons about managing change Step by step the book describes how the use of rapid cycle or 100 day projects will multiply your organization's power to succeed at large scale change Schaffer and Ashkenas specifically outline the concept behind 100 day projects and show you how to Set up the architecture to implement rapid results projects Improve operational performance and also attain hard results in the soft areas of management Build rapid results into major organizational change such as reorganization acquisition integration and international development Use rapid results to drive leadership development and culture change

Models for Industry 4.0 Mantas Vilkas, Jurga Duobienė, Rimantas Rauleckas, Aušra Rūtelionė, Beata

Šeinauskienė, 2022-10-19 This book draws on a neo institutional theory to characterize service oriented manufacturing firms in relation to more familiar organizational forms such as lean and agile It sheds light on whether being lean is a prerequisite for agile organizations and whether agile organizations are precursors of service oriented organizations The book empirically

examines the prevalence of such organizations using representative samples of manufacturing firms in an industrialized country This approach makes it possible to zoom in and determine whether the extent of adoption of digital manufacturing innovations digital services and service oriented business models varies with organizations size industry product complexity lot size type of design process and type of manufacturing process In turn it shows which digital manufacturing innovations lean practices and services contribute to leanness related performance capabilities like quality and costs agility related capabilities like fast delivery flexibility and innovation and service oriented capabilities like high service performance and digitalization In addition it explores the question of whether lean agile and service oriented performance capabilities contribute to financial performance separately or jointly
