Bancroft's Theory and Practice of Histological Techniques E-Book Kim S Suvarna, Christopher Layton, John D.

Bancroft, 2018-02-27 For 40 years Bancroft's Theory and Practice of Histological Techniques has established itself as the standard reference for histotechnologists and laboratory scientists as well as histopathologists. With coverage of the full range of histological techniques used in medical laboratories and pathology departments it provides a strong foundation in all aspects of histological technology from basic methods of section preparation and staining to advanced diagnostic techniques such as immunocytochemistry and molecular testing. This revised and updated 8th Edition by Kim S Suvarna, Christopher Layton and John D Bancroft is a one stop reference for all those involved with histological preparations and applications from student to highly advanced laboratory professional. Presents a thorough up to date and detailed approach to the theory and protocols for preparing cells and tissues for laboratory evaluation covering topics ranging from basic to advanced. Features new content on automation, computer logging and tracking, sub sampling and archiving of samples, digital scanning techniques for slides used in remote telepathology and specialist molecular techniques. Provides superb visual guidance through the use of vivid color illustrations including additional illustrations of diagnostic modalities and techniques. Contains more summary tables, charts and boxes throughout for quick reference. Expert Consult™ eBook version included with purchase. This enhanced eBook experience allows you to search all of the text, figures and references from the book on a variety of devices.

Computer Analysis of Images and Patterns André

Gagalowicz, Wilfried Philips, 2005-09-27 This volume presents the proceedings of the 11th International Conference on Computer Analysis of Images and Patterns CAIP 2005. This conference series started about 20 years ago in Berlin. Initially the conference served as a forum for meetings between scientists from Western and Eastern block countries. Nowadays the conference attracts participants from all over the world. The conference gives equal weight to posters and oral presentations and the selected presentation mode is based on the most appropriate communication medium. The program follows a single track format rather than parallel sessions. Non overlapping oral and poster sessions ensure that all attendees have the opportunity to interact personally with presenters. As for the numbers we received a total of 185 submissions. All papers were reviewed by two to four members of the Program Committee. The final selection was carried out by the Conference Chairs. Out of the 185 papers 65 were selected for oral presentation and 43 as posters. CAIP is becoming well recognized internationally and this year's presentations came from 26 different countries. South Korea proved to be the most active scientifically with a total of 16 accepted papers. At this point we wish to thank the Program Committee and additional referees for their timely and high quality reviews. The paper's mission and review procedure was carried out electronically. We also thank the invited speakers Reinhardt Koch and Thomas Vetter for kindly accepting to present invited papers.

Parejo,2025-08-21 Human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation Post translational modifications PTMs of proteins play a critical role in cancer development and progression PTMs are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell Pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body Pharmacological interventions that target PTMs are a promising area of cancer research and treatment For example PARP Inhibitors Poly ADP ribose polymerase PARP inhibitors are a class of drugs that exploit defects in DNA repair mechanisms particularly in cells with BRCA mutations These inhibitors target the PARP protein which plays a role in DNA repair through PTM processes PARP inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers Ubiquitin Proteasome System UPS Inhibitors The UPS is responsible for the degradation of specific proteins tagged with ubiquitin Some drugs such as bortezomib inhibit the UPS leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells SUMOylation Inhibitors Small ubiquitin like modifier SUMO modification is a PTM that regulates the activity of various proteins Recent research has explored the development of SUMOylation inhibitors to target specific cancer related proteins These are still in the experimental stage The effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics It is important to note that the development and application of these therapies often require a deep understanding of the specific PTMs and their roles in the molecular pathways of different cancer types Additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique PTM profiles and genetic mutations of individual patients tumors Personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches Personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits This Research Topic will focus on post translational modifications PTMs and their role in human cancer within the field of pharmacology This is a highly relevant and significant area of study as understanding how PTMs contribute to cancer development and progression is critical for the development of targeted pharmacological interventions We welcome contributions in the form of Original Research Articles Reviews and Mini Reviews that cover but are not limited to the following topics a Post Translational Modifications PTMs in Cancer Molecular Mechanisms b Pharmacological Approaches Targeting PTMs in Cancer c Personalized Medicine and PTM Profiles d Emerging Trends and Future Directions Please note that If patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as

additional clinical information and assessment of clinical response effects should be included If genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided Studies related to natural compounds herbal extracts or traditional medicine products will not be included in this Research Topic Studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this Research Topic
