Choi-Fitzpatrick,2020-07-28 How small scale drones satellites kites and balloons are used by social movements for the greater good Drones are famous for doing bad things weaponized they implement remote control war used for surveillance they threaten civil liberties and violate privacy In *The Good Drone* Austin Choi Fitzpatrick examines a different range of uses the deployment of drones for the greater good Choi Fitzpatrick analyzes the way small scale drones as well as satellites kites and balloons are used for a great many things including documenting human rights abuses estimating demonstration crowd size supporting anti poaching advocacy and advancing climate change research In fact he finds small drones are used disproportionately for good nonviolent prosocial uses predominate **Halftoning for Multi-Channel Printing** Paula Žitinski Elías,2014-11-20 A seemingly straightforward way to enhance the quality of printed images is to increase the number of colorants beyond the four traditionally used in multi channel printing Potential improvements to reproduced images

include increased colour accuracy enhanced colour smoothness and reduced image graininess Nevertheless numerous challenges exist one of them being the implementation of halftoning algorithms which transform the original image into a binary one that is reproducible by the printing system This thesis concerns the development implementation and verification of halftoning algorithms suitable for an increased number of colorants in multi channel printing The first focus in this thesis is on the implementation of an amplitude modulated AM halftoning method for seven channel printing utilizing CMYKRGB colorants The proposed AM halftoning method utilizes non orthogonal halftone screens instead of orthogonal ones dots thus enabling a wider angle range for the channels that makes possible to accommodate multi channel impressions The performance of the non orthogonal halftoning method was evaluated by computational simulation of channel misregistration for 1600 different scenarios and assessment of printed orthogonal and non orthogonal patches The simulated and printed results demonstrate that the proposed halftoning method utilizing non orthogonal screens shows no visible moir and produces smaller colour shifts in case of misregistration when compared to orthogonal halftoning However the layer thickness of the combined colorants is not controlled by the aforementioned multi channel AM halftoning approach Therefore the second focus in this thesis concerns the adjustment and implementation of a multilevel halftoning algorithm for achromatic and chromatic inks In this algorithm a channel is processed so that it can be printed using multiple inks of same hue value achieving a single ink layer Here the thresholds for ink separation and dot gain compensation pose an interesting challenge Since dot gain originates from the interaction between a specific ink and specific paper compensating the original image for multilevel halftoning means expressing the dot gain of multiple inks in terms of the nominal coverage of a single ink The applicability of the proposed multilevel halftoning workflow is demonstrated using multiple inks while avoiding dot on dot placement and accounting for dot gain The results also show that the multilevel halftoned image is visually improved in terms of graininess and detail enhancement when compared to a bi level halftoned image
