Ophthalmic Radiation Therapy Techniques And Applications Developments In Ophthalmology Vol 52:

Ophthalmic Radiation Therapy A. D. Singh, D. E. Pelayes, S. Seregard, R. Macklis, 2013-08-29 This publication a conjoint effort by ocular oncologists and radiation oncologists comprises ten chapters covering basic and advanced radiation therapy techniques followed by specific indications by location uveal retinal orbital tumors eyelid and conjunctival tumors and complications of radiation therapy A chapter on investigational use of radiation therapy for age related macular degeneration is also included The contributions are illustrated by photographs imaging studies and detailed treatment plans to clearly convey the fundamental concepts Additional tables flow diagrams graphs or charts support the understanding of the subject To ocular oncologists radiation physicists radiation therapists and radiation oncologists this volume is a comprehensive source of authoritative information on the subject of ocular and adnexal radiation therapy

Cell-Based Therapy for Retinal Degenerative Disease R. P. Casaroli-Marano, M. A. Zarbin, 2014-04-14 In this volume some of the leading authorities present their exploration of applications of stem cell therapy to the treatment of major causes of blindness including degenerative diseases and glaucoma The diagnostic approach to patients general concepts of cell based therapy immunological considerations approaches to cell delivery including engineered scaffolds combined cell and gene therapy nanomedicine applications to cell therapy and regulatory issues pertaining to manufacture and production are all considered in detail The book serves as an excellent introduction to a field that is now entering early stage clinical trials and promises to operate at the leading edge of regenerative medicine Retina specialists general ophthalmologists as well as researchers will find here a wealth of information on the translational aspects of cell based therapies Further business executives and students interested in understanding the potential applications of stem cell therapy to retinal degenerative disease and glaucoma will also find this book informative reading

Microincision Vitrectomy Surgery H. Oh, Y. Oshima, 2014-09-01 Over the last two decades tremendous progress has been made in vitrectomy surgery most importantly the significant reduction of the gauge and implementation of microincision vitrectomy surgery MIVS At the same time the introduction of wide viewing systems and the utilization of vital dyes to better recognize structures like the vitreous and membranes have taken place This volume starts with the fundamentals of MIVS introducing both the mechanics and the physics of the latest generation of vitrectomy devices followed by a description of the discrete gauge systems i e 23 25 and 27 gauge Individualized but mandatory settings techniques and technology are also discussed in detail There are also more than ten chapters outlining concrete surgical strategies that give surgeons a thorough overview of the procedures Encompassing an overview of the recent advances in the field this publication provides a valuable tool for general ophthalmologists as well as vitreoretinal specialists to easily review and master up to date information and surgical pearls

Recent Advances in Ophthalmology S. I. Davidson, F. T. Fraunfelder, 2013-10-22 Recent Advances in Ophthalmology focuses on developments in ophthalmology including therapy keratotomy phototoxicity and retinopathy The compilation first offers information on the

therapy of herpes simplex anterior segment surgery and use of viscous and viscoelastic substances in ophthalmology Topics include systemic antiviral agents and ocular disease influence of new instruments and technology criteria for the selection of viscous or viscoelastic material and indications for the use of viscous substances The text then ponders on radial keratotomy intraocular lenses and treatment of congenital cataracts The publication takes a look at ocular phototoxicity and vitreous surgery as well as proliferative diabetic retinopathy posterior penetrating trauma effects of non ionizing radiation on biological systems body temperature and light damage and retinal photodamage The text also touches on the management of diabetic retinopathy treatment of malignant melanomas of the posterior uvea and macular disease with serious retinal detachment The compilation is highly recommended for ophthalmologists and readers interested in the developments in ophthalmology

Radiotherapy of Ocular Disease T. Wiegel, 1997 This book discusses current controversial topics and therapeutic strategies in the treatment of malignant and benign ocular diseases with special emphasis on ocular tumors Written by leading specialists the articles highlight the latest developments in the diagnosis and therapy of retinoblastomas uveal melanomas and malignant lymphomas Further contributions include such topics as the optimization of dosimetry and design of radioactive eye plaques the effects and side effects of radiotherapy of age related macular degeneration and new approaches for perioperative organ preserving brachytherapy for orbital tumors Readers will be particularly interested in the discussion of possible side effects of photon and proton beam radiotherapy of the eye and their minimization Extensive data from clinical studies evaluating radiotherapy in the management of endocrine orbitopathy are also provided The final part is dedicated to radiotherapy of benign ocular diseases such as pterygium or choroidal and retinal hemangiomas Compiling the most up to date and comprehensive information on ocular radiotherapy currently available and offering an interdisciplinary perspective this book will be appreciated by ophthalmologists radiotherapists and oncologists

Updates in Ocular Therapeutics and Surgery, volume II Gerogios D. Panos, Horace Massa, 2024-02-22 Building on the success of Updates in Ocular Therapeutics and Surgery we are pleased to launch Volume II of this Research Topic Ophthalmology is a field of medicine that has grown rapidly during the last few decades Several new and promising treatments have become available for eye conditions including age related macular degeneration glaucoma retinal vein occlusions diabetic macular oedema genetic disorders uveitis and inflammations On the other hand recent technological developments and advanced surgical techniques have drastically changed the daily practice of eye surgeons with new surgical options resulting in safer faster and more precise surgery This Research Topic aims to summarise modern therapeutic and surgical approaches on ocular diseases adding a valuable contribution to our existing knowledge to describe the current state of the art as well as to provide directions for future research

Brady,2009-04-15 Non malignant or benign diseases can be successfully treated using ionizing radiation technologies It was first proposed in 1898 by Sokoloff who reported the analgesic effects of radiotherapy for painful rheumatoid arthritis Since then the use of these techniques for painful muscle skeletal diseases has gained acceptance particularly in Europe but is still carried out actively in the United States Non malignant diseases that are amenable to radiotherapy can be classified as inflammatory degenerative hyperproliferative functional or other disorders However the topographic and morphologic considerations are more relevant Even though radiation therapy for benign diseases has not been pursued actively since the 1950s more recent interest has dictated that it can be a very effective treatment modality The use of radiotherapy can be justified for invasive and aggressive growth such as that seen with desmoids for cosmetic deformations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by Seegenschmiedt et al *Retina E-Book* Charles P. Veterinary Drug Delivery Michael J. Rathbone,R. Gurny,2000-07-20 Many controlled release veterinary drug delivery systems
CRVDDS are presently in use and recently there has been a host of new CRVDDS within veterinary medicine The challenges
of this area of drug delivery arise from the unique anatomy and physiology of the target animal the cost constraints
associated with the value of the animal being treated and the extended periods of time that delivery must be sustained for
often measured in months The purpose of this book is to introduce the reader to the unique opportunities and challenges of
the field of CRVDDS and to explain and discuss the basic controlled release principles underlying the development of
CRVDDS Its aim is to provide an overview of many of the areas where CRVDDS have application and to highlight the
opportunities and prospects for controlled release technology in the veterinary field Controlled Release Veterinary Drug
Delivery comprises chapters that provide workers in the field and those interested in this area with information on the design
development and assessment of a variety of CRVDDS The book contains chapters that describe the relevant animal
physiological and anatomical considerations alongside descriptions of current and emerging controlled release delivery
systems for a variety of routes for drug delivery and present overviews on the physical and chemical assessment of veterinary
controlled release delivery systems The veterinary area is abound with opportunities for the development of controlled
release drug delivery technologies It is an area of medicine that is open to the acceptance of novel drug delivery devices and
which readily encompasses the use of novel routes of administration It is an area of many unmet needs most of which offer
opportunities and unique challenges for the innovative formulation scientist to provide solutions This book will provide an
insight into the biological clinical and pharmaceutical challenges that face the formulation scientist in this interesting and
diverse area of research *Bibliography of Medical Reviews* ,1971
