John O'M. Bockris, Amulya K.N. Reddy, 2012-12-06 Europe is the name for a scintillating variety of historically emerged concepts constantly developed and discussed over time Its complexity and fuzziness is reflected in a multitude of myths topoi symbols and boundaries which all constitute shared knowledge of the concept of EUROPE and which continue to influence attempts to de and re construct European identity The case studies collected in this volume investigate the competing concepts of Europe in political and public discourses from a wide range of perspectives e g frame semantics discourse linguistics multimodal analysis focusing on the following aspects How is EUROPE conceptualised re negotiated and legitimised by different political actors political bodies and institutions How does the European idea change throughout history and how is the re emerging idea of nationality evaluated Modern Electrochemistry John O'M. Materials Nanoarchitectonics Katsuhiko Ariga, Mitsuhiro Ebara, 2018-01-15 A unique overview of the manufacture of and applications for materials nanoarchitectonics placing otherwise hard to find information in context. Edited by highly respected researchers from the most renowned materials science institute in Japan, the first part of this volume focuses on the fabrication and characterization of zero to three dimensional nanomaterials while the second part presents already existing as well as emerging applications in physics, chemistry, biology and biomedicine.

Non-Classical Crystallization of Thin Films and Nanostructures in CVD and PVD Processes Nong Moon Hwang, 2016-06-14 This book provides a comprehensive introduction to a recently developed approach to the growth mechanism of thin films and nanostructures via chemical vapour deposition (CVD). Starting from the underlying principles of the low pressure synthesis of diamond films, it is shown that diamond growth occurs not by individual atoms but by charged nanoparticles. This newly discovered growth mechanism turns out to be general to many CVD and some physical vapor deposition (PVD) processes. This non-classical crystallization is a new paradigm of crystal growth with active research taking place on growth in solution especially in biomineralization processes. Established understanding of the growth of thin films and nanostructures is based around processes involving individual atoms or molecules. According to the author's research over the last two decades, however, the generation of charged gas phase nuclei is shown to be the rule rather than the exception in the CVD process and charged gas phase nuclei are actively involved in the growth of films or nanostructures. This new understanding is called the theory of charged nanoparticles (TCN). This book describes how the non-classical crystallization mechanism can be applied to the growth of thin films and nanostructures in gas phase synthesis. Based on the author's graduate lecture course, the book is aimed at senior undergraduate and graduate students and researchers in the field of thin film and nanostructure growth or crystal growth. It is hoped that a new understanding of the growth processes of thin films and nanostructures will reduce trial and error in research and in industrial fabrication processes.
