Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration

Climate Change Impacts on Water Resources Ramakar Jha, Vijay P. Singh, Vivekanand Singh, L. B. Roy, Roshni Thendiyath, 2021-03-27 This book provides insights and a capacity to understand the climate change phenomenon its impact on water resources and possible remedial measures The impact of climate change on water resources is a global issue and cause for concern Water resources in many countries are extremely stressed and climate change along with burgeoning populations the rise in living standards and increasing demand on resources are factors which serve to exacerbate this stress The chapters provide information on tools that will be useful to mitigate the adverse consequences of natural disasters Fundamental to addressing these issues is hydrological modelling

which is discussed in this book and ways to combat climate change as an important aspect of water resource management

Transboundary Water Resources Management Jacques Ganoulis, Alice Aureli, Jean Fried, 2013-09-13 Based on an international symposium addressing a key issue in global development this reference includes both the latest methodologies for and practical examples of effective management of transboundary water resources Its multidisciplinary approach combines hydrology and environmental science with economic and political approaches in line with new UNESCO and EU recommendations which have been formulated and implemented with the active involvement of all three editors By providing a theoretical framework as well as abundant case studies from southern Europe Africa Asia and South America this handbook provides hydrologists geologists engineers and decision makers with all the knowledge they need for their daily work

The Price of Thirst Karen Piper, 2014-10-01 There s Money in Thirst reads a headline in the New York Times The CEO of Nestl purveyor of bottled water heartily agrees It is important to give water a market value he says in a promotional video so we re all aware that it has a price But for those who have no access to clean water a fifth of the world s population the price is thirst This is the frightening landscape that Karen Piper conducts us through in *The Price of Thirst* one where thirst is political drought is a business opportunity and more and more of our most necessary natural resource is controlled by multinational corporations In visits to the hot spots of water scarcity and the hotshots in water finance Piper shows us what happens when global businesses with mafia like powers buy up the water supply and turn off the taps of people who cannot pay border disputes between Iraq and Turkey a revolution of the thirsty in Egypt street fights in Greece an apartheid of water rights in South Africa *The Price of Thirst* takes us to Chile the first nation to privatize 100 percent of its water supplies creating a crushing monopoly instead of a thriving free market in water to New Delhi where the sacred waters of the Ganges are being diverted to a private water treatment plant fomenting unrest and to Iraq where the U S mandated privatization of water resources destroyed by our military is further destabilizing the volatile region And in our own backyard where these same corporations are quietly buying up water supplies Piper reveals how water banking is drying up California farms in favor of urban sprawl and private towns The product of seven years of investigation across six continents and a dozen countries and scores of interviews with CEOs activists environmentalists and climate change specialists *The Price of Thirst* paints a harrowing picture of a world out of balance with the distance between the haves and have nots of water inexorably widening and the coming crisis moving ever closer

Water Pollution XV S. Mambretti, J.S.P. Palencia Jimenez, 2021 Environmental problems caused by the increase of pollutant loads discharged into natural water bodies requires the formation of a framework for regulation and control This framework needs to be based on scientific results that relate pollutant discharge with changes in water quality The results of these studies allow the industry to apply more efficient methods of controlling and treating waste loads and water authorities to enforce appropriate regulations regarding this matter Water pollution problems are essentially interdisciplinary Engineers and scientists working in this field must be

familiar with a wide range of issues including the physical processes of mixing and dilution chemical and biological processes mathematical modelling data acquisition and measurement to name but a few In view of the scarcity of available data it is important that experiences are shared on an international basis Thus a continuous exchange of information between scientists from different countries is essential Papers presented at Water Pollution 2020 the 15th International Conference in the series of Monitoring Modelling and Management of Water Pollution are contained in this volume and highlight research works from scientists managers and academics from different areas of water contamination

Scale in Spatial Information and Analysis Jingxiong Zhang, Peter Atkinson, Michael F. Goodchild, 2014-04-15 Now ubiquitous in modern life spatial data present great opportunities to transform many of the processes on which we base our everyday lives However not only do these data depend on the scale of measurement but also handling these data e g to make suitable maps requires that we account for the scale of measurement explicitly Scale in Spatial Information and Analysis describes the scales of measurement and scales of spatial variation that exist in the measured data It provides you with a series of tools for handling spatial data while accounting for scale The authors detail a systematic strategy for handling scale issues from geographic reality through measurements to resultant spatial data and their analyses They also explore a process pattern paradigm in approaching scale issues This is well reflected for example in chapters dealing with terrain analysis in which scale in terrain derivatives is described in relation to the processing involved in the derivation of specific terrain variables from elevation data and area classes which are viewed as driven by class forming covariates Lastly this book provides coverage of some of the issues related to scale that are relatively under represented in the literature such as the effects of scale on information content in remotely sensed images and the interaction between scale and uncertainty that is increasingly important for spatial information and analysis By taking a rigorous scientific approach to scale and its various meanings in relation to the geographic world the book alleviates some of the frustration caused by dealing with issues of scale While past research has led to an increasing number of journal articles and a few books dedicated to scale modeling and change of scale this book helps you to develop coherent strategies for scale modeling highlighting applicability for a variety of fields from geomatic engineering and geoinformatics to environmental modeling

What Is Water? Jamie Linton,2010-07-01 We all know what water is

and we often take it for granted But the spectre of a worldwide water crisis suggests that there might be something

fundamentally wrong with the way we think about water Jamie Linton dives into the history of water as an abstract concept stripped of its environmental social and cultural contexts Reduced to a scientific abstraction to mere H₂O this concept has given modern society licence to dam divert and manipulate water with apparent impunity Part of the solution to the water crisis involves reinvesting water with social content thus altering the way we see water An original take on a deceptively complex issue What Is Water offers a fresh approach to a fundamental problem
