**Molecular Thermodynamics Of Electrolyte Solutions (Second Edition)** Lloyd L. Lee, 2021-01-07 Electrolytes and salt solutions are ubiquitous in chemical industry, biology, and nature. This unique compendium introduces the elements of the solution properties of ionic mixtures. In addition, it also serves as a bridge to the modern researches into the molecular aspects of uniform and non-uniform charged systems. Notable subjects include the Debye-Hückel limit, Pitzer's formulation, Setchenov salting out, and McMillan-Mayer scale. Two new chapters on industrial applications, natural gas treating and absorption refrigeration, are added to make the book current and relevant. This textbook is eminently suitable for undergraduate and graduate students. For practicing engineers without a background in salt solutions, this introductory volume can also be used as a self-study.

**Molecular Thermodynamics of Nonideal Fluids** Lloyd L. Lee, 2016-02-06 *Molecular Thermodynamics of Nonideal Fluids* serves as an introductory presentation for engineers to the concepts and principles behind and the advances in molecular thermodynamics of nonideal fluids. The book covers related topics such as the laws of thermodynamics, entropy, its ensembles, the different properties of the ideal gas, and the structure of liquids. Also covered in the book are topics such as integral equation theories, theories for polar fluids, solution thermodynamics, and molecular dynamics. The text is recommended for engineers who would like to be familiarized with the concepts of molecular thermodynamics in their field, as well as physicists who would like to teach engineers the importance of molecular thermodynamics in the field of engineering.

**Molecular Thermodynamics of Mixtures**

**Containing Electrolytes with Common Gases and Solvents** Allan Herbert Harvey, 1988      **Thermodynamics of Solutions** Eli Ruckenstein, Ivan L. Shulgin, 2009-06-17

This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade. Even though they involve different topics and different systems, they have something in common which can be considered as the signature of the present book. First, these papers are concerned with difficult or very nonideal systems, i.e., systems with very strong interactions, e.g., hydrogen bonding between components or systems with large differences in the partial molar volumes of the components, e.g., the aqueous solutions of proteins or systems that are far from normal conditions, e.g., critical or near critical mixtures. Second, the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures. Last, but not least, these systems are of interest for the pharmaceutical, biomedical, and related industries. In order to meet the thermodynamic challenges involved in these complex mixtures, we employed a variety of traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques. The Kirkwood-Buff (KB) theory is a rigorous formalism which is free of any of the approximations usually used in the thermodynamic treatment of multicomponent systems. This theory appears to be very fruitful when applied to the above-mentioned difficult systems.
