**Handbook on Electroplating with Manufacture of Electrochemicals (Electroplating of Aluminium, Cadmium, Chromium, Cobalt, Copper, Gold, Iron, Lead, Nickel, Bright Nickel, Silver, Alloy, Platinum,**

**Palladium, Rhodium, Bright Zinc, Tin, Plastics, Barrel, Electroless Plating, Metal Treatment with Formulation, Machinery, Equipment Details and Factory Layout)** Dr. H. Panda, 2024-01-01

Electroplating and Electrochemicals industries shimmering with growth and profitability potential are truly riveting. Electroplating, an intricate process, involves the electrodeposition of a sleek metallic stratum onto diverse substrates utilizing electric currents. This technique entails submerging the intended object, the substrate, into an electrolytic bath brimming with metal ions and, through the application of an electric current, achieves a homogeneous metallic veneer. Conversely, Electrochemicals are birthed from electrochemical reactions. These intricate reactions are characterized by the transference of electrons among distinct compounds within an electrolytic milieu. Through the deliberate orchestration of electron flow, a plethora of chemical reactions are catalyzed, culminating in the synthesis of targeted chemicals. This methodology finds its application across a spectrum of industries encompassing pharmaceuticals, agriculture, and energy storage sectors. The global electroplating market is expected to grow at a CAGR of 5.5%. The growth in the market can be attributed to the increasing demand for electroplated products from various end-use industries such as automotive, electrical, electronics, aerospace, defense, Jewellery, and machinery parts components. In addition, the growing awareness about corrosion protection and decorative finishes is also propelling the growth of this market.
