Heinz Gerischer, Charles W. Tobias, 2008-09-26 Like its predecessors volume three of this meanwhile well established series covers selected topics from electrochemical science and its applications The authors have been carefully selected among the leaders in the respective fields Their authoritative and comprehensive contributions represent the latest state of the art Special attention is paid to recent developments which are critically and thoroughly discussed Each contribution of the present volume continues the high standards of this series This new series has been warmly welcomed by scientists world wide which is reflected by the following review of the second volume All the contributions in this volume are well up to the standard of this excellent series and will be of great value to electrochemists The editors again deserve to be congratulated on this fine collection of reviews *Journal of Electroanalytical Chemistry and Interfacial Chemistry* **Electroplating and Metal Spraying** ,1955 **Atomic and Ionic Impact Phenomena on Metal Surfaces** M. Kaminsky, 2013-03-08 The collisions of neutral or charged gaseous particles with solid surfaces govern many physical and chemical phenomena as has been The gas solid phenomena in turn depend on a recognized for a long time great variety of processes such as the charge transfer of the gas solid interface adsorption and desorption the energy transfer between an incident particle and the surface etc Our knowledge of these processes however is only fragmentary This is partly due to the difficulty in adequately controlling the experimental conditions Consequently until recently the data were usually so complex that reliable information about a particular elementary process could not be deduced Within the last five to ten years however the techniques of ultra high vacuum and surface preparation have developed rapidly and there has been a booming and widespread interest in the role of gas solid interactions in such diverse fields as plasma physics thermonuclear reactions thermionic energy conversion ion propulsion sputtering corrosion of the surface of satellites and ion engines ion getter pumps deposition of thin films etc This led to extensive investigations of numerous gas solid phenomena such as surface ionization sputtering emission of secondary electrons and ions from surfaces under atom and or ion impact ion neutralization and the thermal accommodation of gaseous particles on surfaces As a result it has become possible to gather a variety of valuable information Catalog of Copyright Entries.
