in nuclear magnetic resonance NMR spectroscopy that took place during the last several decades is observed in both experimental capabilities and theoretical approaches to study the spectral parameters. The scope of NMR spectroscopy for studying a large series of molecular problems has notably broadened. However at the same time it requires specialists to fully use its potentialities. This is a notorious problem and it is reflected in the current literature where this spectroscopy is typically only used in a routine way. Also it is seldom used in several disciplines in which it could be a powerful tool to study many problems. The main aim of this book is to try to help reverse these trends. This book is divided in three parts dealing with 1 high resolution NMR parameters 2 methods for understanding high resolution NMR parameters and 3 some experimental aspects of high resolution NMR parameters for studying molecular structures. Each part is divided into chapters written by different specialists who use different methodologies in their work. In turn each chapter is divided into sections. Some features of the different sections are highlighted; it is expected that part of the readership will be interested only in the basic aspects of some chapters while other readers will be interested in deepening their understanding of the subject dealt with in them. Shows how NMR parameters are useful for structure assignment as well as to obtain insight on electronic structures. Emphasis on conceptual aspects. Contributions by specialists who use the discussed methodologies in their everyday work. *High Resolution NMR Spectroscopy* Rubén H. Contreras, Cláudio F. Tormena, Lucas C. Ducati, T.

Llorente, 2013-06-08 In this chapter the qualitative model described in is applied to show systematic rationalizations in terms of chemical interactions that define well known trends for chemical shifts corresponding to ^{13}C , ^{15}N , ^{17}O and ^{19}F isotopes. The theoretical fundamentals for this approach are given in. They could be a bit difficult to follow for readers who do not have a good training in physics and mathematics. However this difficulty was intended to be overcome by resorting in to describing this approach and providing physically several mathematical expressions and describing them in terms of familiar concepts employed frequently in different branches of chemistry and structural biology. The authors believe that once readers understand how easy this approach is and how it facilitates building pictorial representations of how several chemical interactions can be detected by means of high resolution NMR spectroscopy the initial problems will be overcome very soon.

Applications of NMR Spectroscopy: Volume 3 Atta-ur Rahman, M. Iqbal Choudhary, 2015-12-11 Applications of NMR Spectroscopy Volume 3 presents the latest developments in the field of NMR spectroscopy including the analysis of the structure property relationship of polyphenols, breast cancer diagnosis, drug discovery and formulation, protein confirmation analysis using Fluorine NMR and enaminone studies. The well illustrated chapters contain comprehensive references to the recent literature. The content is ideal for readers who are seeking reviews and updates as it consolidates scientific articles of a diverse nature into a single volume. The book is organized into sections based on disciplines such as food science and medical diagnostics with each chapter written by eminent experts in the field. The applications presented cover a wide range of the field such as drug development, medical imaging and diagnostics, food science, mining, petrochemical, process control.
