Communication Yearbook 21 Michael Roloff,2012-03-22 The Communication Yearbook annuals publish diverse state of the discipline literature reviews that advance knowledge and understanding of communication systems processes and impacts across the discipline Sponsored by the International Communication Association each volume provides a forum for the exchange of interdisciplinary and internationally diverse scholarship relating to communication in its many forms This volume re issues the yearbook from 1998 *Annual Report of the Pacific Northwest Forest and Range Experiment Station for the Calendar Year ...* Pacific Northwest Forest and Range Experiment Station (Portland, Or.), *Mc Graw-Hill Yearbook of Science and Technology* ,1962 Interpretation of Micromorphological Features of Soils and Regoliths Georges Stoops,Vera Marcelino,Florias Mees,2018-09-17 Interpretation of Micromorphological Features of Soils and Regoliths Second Edition provides researchers and students with a tool for interpreting features observed in soil thin sections and through submicroscopic studies After an introduction and general overview micromorphological aspects of regoliths e g saprolites transported materials are highlighted followed by a systematic and coherent discussion of the micromorphological expression of various pedogenic processes The book is written by an international team of experts in the field using a uniform set of concepts and terminology making it a valuable interdisciplinary reference work The following topics are treated freeze thaw features redoximorphic features calcareous and gypsiferous formations textural features spodic and oxic horizons volcanic materials organic matter surface horizons laterites surface crusts salt minerals biogenic and pedogenic siliceous materials other authigenic silicates phosphates sulphidic and sulphuric materials and features related to faunal activity The last chapters address anthropogenic features archaeological materials and palaeosoils Updates the first exhaustive publication on interpretation of micromorphological features with some new chapters and with a larger number of additional references Covers related topics making micromorphology more attractive and accessible for geomorphologists archaeologists and quaternary geologists Includes thematic treatment of a range of soil micromorphology fields and broadens its applications Features input from a multi disciplinary team ensuring thorough coverage of topics related to soil science archaeology and geomorphology **The Evolution of the Long-necked Giraffe (Giraffa Camelopardalis L.)** Wolf-Ekkehard Lönig,2011 Darwin 1871 and many African folk legends before him proposed a simple but powerful explanation for the large and elongated shape Long necks allowed giraffe to outreach presumed competitors particularly during dry season bottlenecks when leaves become scarce Simmons and Scheepers However this old African folk legend which is still commonly taught in high schools fails to explain among other things the size differences between males and females Giraffe cows are up to 1.5 meters shorter than the giraffe bulls not to mention the offspring The wide migration range of the giraffe and the low heights of the most common plants in their diet likewise argue against the dominant selection hypothesis Also 1 The fossil links which

according to the theory should appear successively and replace each other usually exist simultaneously for long periods of time 2 Evolutionary derivations based on similarities rely on circular reasoning 3 The giraffe has eight cervical vertebrae Although the 8th vertebra displays almost all the characteristics of a neck vertebra as an exception to the rule the first rib pair is attached there 4 The origin of the long necked giraffe by a macromutation is due to the many synorganized structures extremely improbable 5 Sexual selection also lacks a mutational basis and what is more is frequently in conflict with natural selection head clubbing is probably a consequence of a long neck and not a cause see also Mitchell et al 2009 6 In contrast to the thus far proposed naturalistic hypotheses the intelligent design theory is basically testable 7 The long necked giraffes possibly all belong to the same basic type inasmuch as 8 a gradual evolution from the short necked to the long necked giraffe is ruled out by the duplication of a neck vertebra and the loss of a thoracic vertebra 9 Chance mutations are principally not sufficient to explain the origin of the long necked giraffe 10 The intelligent design theory offers an adequate and satisfying solution to the problems and points to numerous old and new research projects 11 Mitchell and Skinner present a good analysis of the selectionist problem however their phylogenetic hypotheses presuppose the correctness of the synthetic evolutionary theory and their claims of intermediate forms are unproven similarly summary Part 2 Part 1 shows why Dawkins and Kutschera are wrong The scientific facts speak for design
