Materials Science on CD-ROM Andrew J. Green, Boban Tanovic, Ian Jones, Ann Fretwell, Peter J. Goodhew, 1998-01-22 Materials Science on CD ROM has been designed by the MATTER team for teachers and students of materials science metallurgy engineering and other related disciplines This collection of completely interactive learning

modules created to make use of those functions best performed by computer makes it easier to understand the complex concepts of this challenging discipline Designed to complement traditional teaching and learning methods this CD ROM fits well with the current selection of textbooks available and serves as a stimulating resource for teachers explaining new concepts Materials Science on CD ROM guides students through the key concepts at their own pace The hands on approach to learning can accelerate the understanding of materials science and prove extremely useful in reviewing for exams Its highly interactive facilities allow students to test their own understanding for example they can see how graphs and processes change by selecting different parameters They can also test their knowledge by answering the questions that appear within each module Graphical animation and hypertext links between related screens and topics further enhance these features

This book presents advances in state of the art solution methods and their applications to real life practical problems in optimization, control and operations research. Contributions from world class experts in the field are collated here in two parts dealing first with optimization and control theory and then with techniques and applications. Topics covered in the first part include control theory on infinite dimensional Banach spaces, history dependent inclusion and linear programming complexity theory. Chapters also explore the use of approximations of Hamilton-Jacobi-Bellman inequality for solving periodic optimization problems and look at multi objective semi infinite optimization problems and production planning problems. In the second part the authors address techniques and applications of optimization and control in a variety of disciplines such as chaos, synchronization, facial expression recognition and dynamic input output economic models. Other applications considered here include image retrieval, natural earth satellites, orbital transfers, snap back repellers and modern logistic systems. Readers will learn of advances in optimization, control and operations research as well as potential new avenues of research and development. The book will appeal to scientific researchers, mathematicians and all specialists interested in the latest advances in optimization and control.
