Deep Time in Genesis Steven R. Webb, 2016-03-31. The early chapters of Genesis have generated a battleground between people that believe the Earth is very young on the order of 6000 years and those that believe it is much older. What has been mostly missing from this battle are the observations of professional Christian geologists. Webb invites you to join his world to see the kind of work that geologists do that leads them to draw certain conclusions on this subject. It is written in laymen's language and is designed to unite a variety of issues ranging from Noah's Flood to dinosaurs to early hominids to the Garden of Eden etc while maintaining the integrity of Scripture.

Capitalism and Environmental Collapse Luiz Marques, 2020-08-17 This book intends to be an alert to the fact that the curve measuring environmental costs against the economic benefits of capitalism has irreversibly entered into a negative phase The prospect of an environmental collapse has been evidenced by the sciences and the humanities since the 1960s Today it imposes its urgency This collapse differs from past civilizations in that it is neither local nor just civilizational It is global and occurs at the broadest level of the biosphere accelerated by the convergence of different socio environmental crises such as Earth energy imbalance climate change and global warming Sea level rise Decrease and degradation of forests Collapse of terrestrial and aquatic biodiversity Floods droughts wildfires and extreme weather events Degradation of soils and water resources Increase in pollution caused by fossil fuels and coal Increase in waste production and industrial intoxication The book is divided in two parts In the first part it presents a comprehensive review of scientific data to show the already visible effects of each of the different environmental crises and its consequences to human life on Earth In the second part Luiz Marques critically discusses what he calls the three concentric illusions that prevent us from realizing the gravity of the current socio environmental crises the illusion of a sustainable capitalism the illusion that economic growth is still capable of providing more well being and the anthropocentric illusion Finally Marques argues that fitting back into the biosphere will only be possible if we dismantle the expansive socioeconomic gear that has shaped our societies since the 16th century by moving from a Social Contract to a Natural Contract which takes into account the whole biosphere According to him the future society will be post capitalist or it will not be a complex society and even perhaps we must fear no society at all This book is backed up with the latest and best science and has made the complexities understandable for the average reader all in a context of hope for the future William J Ripple PhD Distinguished Professor of Ecology Director of the Alliance of World Scientists Oregon State University

Multiple Abiotic Stress Tolerances in Higher Plants N.K. Gupta, Yuri Shavrukov, R.K. Singhal, Nikolai Borisjuk, 2023-10-03 In the last 50 years classical breeding has played a significant role in achieving higher crop productivity but major crops have reached a plateau in their yield potential Therefore the current focus for sustainable intensification of agriculture is the use of biotechnological approaches to enhance the yield potential by combating the yield losses that occur due to abiotic stresses The abiotic stresses are governed by multigenes and therefore a holistic approach is needed to get success in imparting stress tolerance to enhance the yield

potential of our crops Plants face multiple stress conditions during their life stages and adopt several physiological biochemical and molecular strategies to combat that which are sometimes not sufficient to survive particularly crop plants The climate change era has created a need to understand the abiotic stresses in a holistic way Therefore a deep understanding of multiple abiotic stress mechanisms is necessary to develop crops tolerant to climate fluctuation With this background the outline of this book covers the following features Agriculture sustainability and molecular understanding of multiple stress tolerance Systems biology for life history strategies conventional and genomic approaches above and underground Genetic resources and molecular understanding of seed priming Molecular signaling compounds cell signal transduction and crosstalk between plant growth hormones and regulators Roles Transcription factors LEA proteins reactive oxygen species and alternative oxidase Genome editing metabolomics and omics technologies *Pathways* ,2012 DVD ROM combines four previously separate components a teacher s resource projectable student book files test bank and website
