Patient Heal Thyself How The New Medicine Puts The Patient In Charge:

Patient, Heal Thyself Robert M. Veatch, 2023 In this work the author sheds light on a fundamental change sweeping through the American health care system a change that puts the patient in charge of treatment to an unprecedented extent

Patient, Heal Thyself Robert Veatch, 2008-11-04 Robert Veatch one of the founding fathers of contemporary bioethics sheds light on a fundamental change sweeping through the American health care system a change that puts the patient in charge of treatment to an unprecedented extent The change is in how we think about medical decision making Whereas medicine's core idea was that medical decisions should be based on the hard facts of science the province of the doctor the new medicine contends that medical decisions impose value judgments Since physicians are not trained to make value judgments the pendulum has swung greatly toward the patient Patient, Heal Thyself Robert M. Veatch, 2009 Robert Veatch is one of the most distinguished American bioethicists having in many ways helped to create that field His new book is on a theme he has developed for thirty years his view that a fundamental and radical change is sweeping through the American health care system but has so far received relatively little attention This change is so fundamental and far reaching that Veatch claims we are in the early stages of a new medicine that will replace what we think of as modern medical practice The change is in how we think about medical decision making Whereas modern medicine's core idea was that medical decisions should be based on the cold hard facts of science the province of the doctor the new medicine reflects the notion that medical decisions impose value judgments Since physicians can claim no expertise on making those value judgments the pendulum has swung greatly toward the patient in evaluating alternatives and making decisions about their treatment While the doctor's expertise is consulted the patient is in control In short doctor no longer knows best Veatch shows how this is only true for value loaded interventions abortion euthanasia genetics but coming to be true for almost every routine procedure in medicine everything from setting broken arms to choosing drugs for cholesterol or osteoporosis Veatch uses a range of fascinating contemporary and historical examples to reveal how values underly almost all medical procedures and illustrate his case that this change is inevitable and a positive trend for patients Dealing with Bioethical Issues in a Globalized World Joris Gielen, 2020-01-09 This book addresses the complexity of talking about normativity in bioethics within the context of contemporary multicultural and multi religious society It offers original contributions by specialists in bioethics exploring new ways of understanding normativity in bioethics In bioethical publications and debates the concept of normativity is often used without consideration of the difficulties surrounding it whereas there are many competing claims for normativity within bioethics Examples of such competing normative bioethical discourses can be perceived in variations and differences in bioethical arguments within individual religions and the opposition between bioethical arguments from specific religions and arguments from bioethicists who do not claim religious allegiance We also cannot merely assume that a Western understanding of normative bioethics will be unproblematic in bioethics in non

Western cultures and religions Through an analysis of normativity in Christian Hindu Buddhist Islamic and Jewish bioethics the book creates awareness of the complexity of normativity in bioethics The book also covers normative bioethics outside an explicitly religiously committed context and specific attention is paid to bioethics as an interdisciplinary endeavor It reveals how normativity relates to empirical and global bioethics which challenges it faces in bioethics in secular pluralistic society and how to overcome these By doing that this book fills an important gap in bioethics literature

Person-centred Health Care Stephen Buetow, 2016-06-10 Person centred health care is increasingly endorsed as a key element of high quality care yet in practice it often means patient centred health care This book scrutinizes the principle of primacy of patient welfare which although deeply embedded in health professionalism is long overdue for critical analysis and debate It appears incontestable because patients have greater immediate health needs than clinicians and the patient clinician encounter is often recognized as a moral enterprise as well as a service contract However Buetow argues that the implication that clinician welfare is secondary can harm clinicians patients and health system performance Revaluing participants in health care as moral equals this book advocates an ethic of virtue to respect the clinician as a whole person whose self care and care from patients can benefit both parties because their moral interests intertwine and warrant equal consideration It then considers how to move from values including moral equality in health care to practice for people in their particular situations Developing a genuinely inclusive concept of person centred care accepting clinicians as moral equals it also facilitates the coalescence of patient centred care and evidence based health care This reflective and provocative work develops a constructive alternative to the taken for granted principle of primacy of patient welfare It is of interest to students and academics in the health and caring sciences philosophy ethics medical humanities and health

Benedict, 2017-04-25 This book supports the emerging field of vascularized composite allotransplantation VCA for face and upper limb transplants by providing a revised ethically appropriate consent model which takes into account what is actually required of facial and upper extremity transplant recipients In place of consent as permission giving waiver or autonomous authorization the standard approaches this book imagines consent as an ongoing mutual commitment i e as covenant consent The covenant consent model highlights the need for a durable personal relationship between the patient subject and the care provider researcher Such a relationship is crucial given the recovery period of 5 years or more for VCA recipients The case for covenant consent is made by first examining the field of vascularized composite allotransplantation the history and present understandings of consent in health care and the history and use of the covenant concept from its origins through its applications to health care ethics today This book explains how standard approaches to consent are inadequate in light of the particular features of facial and upper limb transplantation In contrast use of the covenant concept creates a consent model
