types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development
