Berndt,2014-06-01 The Metis of Projects

addresses veteran project manager Ben Berndt's unease with the use of established project management frameworks given their general inefficacy. Despite the use of these frameworks, it is estimated that some 30% of projects still fail because they deliver too late, cost more than expected, and/or lack quality. Often projects and their environments are too complex to be controlled by rather linear frameworks. Where most practitioners define complexity as complicated, most academics define complexity more correctly as interrelatedness. In recent years, the academic community has developed several levels of complexity frameworks; however, these frameworks are not commonly known to practitioners and are therefore not regularly used. And when examined further, these frameworks appear to be merely environmental scans used to assess the level of complexity in the project management environment. But projects also carry inherent complexity: they are socially complex, and it is this social complexity that paradoxically needs management. Combined with personality assessments, social network theory is used here to glean a better understanding of the social complexity in a project. Berndt believes that following Hugo Letiche and Michael Lissack's emergent coherence concept, managers should steer clear of frameworks in order to come to grips with the complex, and so he introduces whole systems methodologies in which group understanding is used to continually set a next step. Berndt concludes his study by describing his multi-view, multi-tool participative project management style, which he thinks best aligns with managing the complex.

The Projectification of the Public Sector Damian Hodgson, Mats Fred, Simon Bailey, Patrik Hall, 2019-03-06. In recent decades, we have witnessed an increasing use of projects and similar temporary modes of organising in the public sector of nations in Europe and around the world. While for some this is a welcome development which unlocks entrepreneurial zeal and renders public services more flexible and accountable, others argue that this seeks to depoliticise policy initiatives, rendering them increasingly technocratic, and that the project organisations formed in this process offer fragmented and unsustainable short-term solutions to long-term problems. This volume sets out to address public sector projectification by drawing together research from a range of academic fields to develop a critical and theoretically informed understanding of the causes, nature, and consequences of the projectification of the public sector. This book includes 13 chapters and is organised into three parts. The first part centres on the politics of projectification, specifically the role of projects in depoliticisation, often accomplished by rendering the political technical. The chapters in the second part all relate to the reframing of the relationship between the centre and periphery, or

between policy making and implementation and the role of temporality in reshaping this relation The third and final part brings a focus upon the tools techniques and agents through which public sector projectification is assembled constructed and performed
