to prepare an English edition for the series Advances in Global Change Research which guaranteed a wider circulation Timberline is a worldwide and very heterogeneous phenomenon which can only be presented by way of examples My own field experience is necessarily limited to certain timberline areas such as the Alps northern Scandinavia northern Finland and many high mountain ranges in the western United States and Canada However my own observations and the results of my and my previous collaborators research were essential for developing the concept of the book and became integrated into the picture of timberline that is presented in the following chapters

Seaweeds Klaus Lüning, 1991-01-16 A translated thoroughly revised and updated edition of the German work Part I presents the geographic distribution of seaweeds and seagrasses around the world environmental factors floral history and relevant paleoceanographic considerations covered geographically Part II covers seaweed ecophysiology including the relationships of light temperature salinity and other abiotic factors on seaweed distribution as well as biotic factors such as competition herbivory predation and parasitism in order to elucidate the ecophysiologic bases for the distribution patterns examined in Part I
