Composing Media Composing Embodiment Kristin L Arola, Anne

Wysocki,2012-03-31 What any body is and is able to do cannot be disentangled from the media we use to consume and produce texts from the Introduction Kristin Arola and Anne Wysocki argue that composing in new media is composing the body is embodiment In Composing Media Composing Embodiment they havebrought together a powerful set of essays that agree on the need for compositionists and their students to engage with a wide range of new media texts These chapters explore how texts of all varieties mediate and thereby contribute to the human experiences of communication of self the body and composing Sample assignments and activities exemplify how this exploration might proceed in the writing classroom Contributors here articulate ways to understand how writing enables the experience of our bodies as selves and at the same time to see the work of our writing in mediating selves to make them accessible to institutional perceptions and constraints These writers argue that what a body does and can do cannot be disentangled from the media we use nor from the times and cultures and technologies with which we engage To the discipline of composition this is an important discussion because it clarifies the impact s of literacy on citizens freedoms and societies To the classroom it is important because it helps compositionists to support their students as they enact learn and reflect upon their own embodied and embodying writing

**The Problem with Software** Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn t teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In The Problem with Software Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn t teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It s an open secret that there is little engineering in software engineering which continues to rely not on codified

scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship
