The technology and culture of sound recording in America* David Morton, 1964 Off the Record David Morton, 2000-02-01 Morton research historian for the IEEE History Center at Rutgers U examines the process of invention innovation and diffusion of communications technology in the development of the phonograph record recording for radio the dictation machine the telephone answering machine and home taping The Soundscape of Modernity Emily Thompson, 2004-09-17 A vibrant history of acoustical technology and aural culture in early twentieth century America In this history of aural culture in early twentieth century America Emily Thompson charts dramatic transformations in what people heard and how they listened What they heard was a new kind of sound that was the product of modern technology They listened as newly critical consumers of aural commodities By examining the technologies that produced this sound as well as the culture that enthusiastically consumed it Thompson recovers a lost dimension of the Machine Age and deepens our understanding of the experience of change that characterized the era Reverberation equations sound meters microphones and acoustical tiles were deployed in places as varied as Boston s Symphony Hall New York s office skyscrapers and the soundstages of Hollywood The control provided by these technologies however was applied in ways that denied the particularity of place and the diverse spaces of modern America began to sound alike as a universal new sound predominated Although this sound clear direct efficient and nonreverberant had little to say about the physical spaces in which it was produced it speaks volumes about the culture that created it By listening to it Thompson constructs a compelling new account of the experience of modernity in America *The Sound Studies Reader* Jonathan Sterne, 2012-11-12 The Sound Studies Reader blends recent work that self consciously describes itself as sound studies along with earlier and lesser known scholarship on sound from across the humanities and social sciences The Sound Studies Reader touches on key themes like noise and silence architecture acoustics and space media and reproducibility listening voices and disability culture community power and difference and shifts in the form and meaning of sound across cultures contexts and centuries Writers reflect on crucial historical moments difficult definitions and competing accounts of the role of sound in culture and everyday life Across the essays readers will gain a sense of the range and history of key debates and discussions in sound studies The collection begins with an introduction to welcome novice readers to the field and acquaint them the main issues in sound studies Individual section introductions give readers further background on the essays and an extensive up to date bibliography for further reading in sound studies make this an original and accessible guide to the field Contributors Rick Altman Jacques

*Musicking in Twentieth-Century Europe* Klaus Nathaus, Martin Rempe, 2020-12-16 Music has gained the increasing attention of historians. Research has branched out to explore music-related topics including creative labor, economic histories of music production, the social and political uses of music, and musical globalization. This handbook both covers the history of music in Europe and probes its role for the making of Europe during a long twentieth century. It offers concise guidance to key historical trends as well as the most important research on central topics within the field. Communication and Technology Lorenzo Cantoni, James A. Danowski, 2015-08-31 The primary goal of the Communication and Technology volume 5th within the series Handbooks of Communication Science is to provide the reader with a comprehensive compilation of key scholarly literature identifying theoretical issues, emerging concepts, current research, specialized methods, and directions for future investigations. The internet and web have become the backbone of many new communication technologies, often transforming older communication media through digitization to make them compatible with the net. Accordingly, this volume focuses on internet/web technologies. The essays cover various infrastructure technologies ranging from different kinds of hard-wired elements to a range of wireless technologies such as WiFi, mobile telephony, and satellite technologies. Audio/visual communication is discussed with reference to large-format motion pictures, medium-sized television, and video formats, and the small-screen mobile smartphone. There is also coverage of audio-only media such as radio, music, and voice telephony; text media in such venues as online newspapers, blogs, discussion forums, and mobile texting; and multi-media technologies such as games and virtual reality. **Convergence Media History** Janet Staiger, Sabine Hake, 2009-07 **Convergence Media History** explores the ways that digital convergence has radically changed the field of media history. Writing media history is no longer a matter of charting the historical development of an individual medium such as film or television. Instead, now that various media from blockbuster films to everyday computer use intersect regularly via convergence, scholars must find new ways to write media history across multiple media formats. This collection of eighteen new essays by leading media historians and scholars examines the issues today in writing media history and histories. Each essay addresses a single medium, including film, television, advertising, sound recording, new media, and more, and connects that specific medium's history to larger issues for the field in writing multi-media or convergent histories. Among the volume's topics are new media technologies and their impact on traditional approaches to media history; alternative accounts of film production and

exhibition with a special emphasis on film across multiple media platforms the changing relationships between audiences fans and consumers within media culture and the globalization of our media culture      **Listening Devices** Jens Gerrit Papenburg, 2023-05-04 From 1940 to 1990 new machines and devices radically changed listening to music Small and large single records new kinds of jukeboxes and loudspeaker systems not only made it possible to playback music in a different way they also evidence a fundamental transformation of music and listening itself Taking the media and machines through which listening took place during this period Listening Devices develops a new history of listening Although these devices were and often still are easily accessible up to now we have no concept of them To address this gap this volume proposes the term listening device In conjunction with this concept the book develops an original and fruitful method for exploring listening as a historical subject that has been increasingly organized in relation to technology Case studies of four listening devices are the points of departure for the analysis which leads the reader down unfamiliar paths traversing the popular sound worlds of 1950s rock n roll culture and the disco and club culture of the 1970s and 1980s Despite all the characteristics specific to the different listening devices they can nevertheless be compared because of the fundamental similarities they share they model and manage listening they actively mediate between the listener and the music heard and it is this mediation that brings both listener and the music listened to into being Ultimately however the intention is that the listening devices themselves should not be heard so that the music they playback can be heard Thus they take the history of listening to its very limits and confront it with its other a history of non listening The book proposes listening device as a key concept for sound studies popular music studies musicology and media studies With this conceptual key a new productive understanding of past music and sound cultures of the pre digital era can be unlocked and not least of the listening culture of the digital present

Technology Matters David E. Nye, 2007-08-24 Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters Technology matters writes David Nye because it is inseparable from being human We have used tools for more than 100 000 years and their central purpose has not always been to provide necessities People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks Perhaps this is because we are intimate with devices and machines from an early age as children we play with technological toys trucks cars stoves telephones model railroads Playstations Through these machines we imagine ourselves into a creative relationship with the world As adults we retain this technological playfulness with gadgets and appliances Blackberries cell phones GPS navigation systems in our cars We use technology to shape our world yet we think little about the choices we are making In Technology Matters Nye tackles ten central questions about our relationship to technology integrating a half century of ideas about technology into ten cogent and concise chapters with wide ranging historical examples from many societies He asks Can we define technology Does technology shape us or do we shape it Is technology inevitable or unpredictable Why do experts often fail to get it right How do historians understand it Are we using modern

technology to create cultural uniformity or diversity To create abundance or an ecological crisis To destroy jobs or create new opportunities Should the market choose our technologies Do advanced technologies make us more secure or escalate dangers Does ubiquitous technology expand our mental horizons or encapsulate us in artifice These large questions may have no final answers yet but we need to wrestle with them to live them so that we may as Rilke puts it live along some distant day into the answers
