Structural Prognostics and Health Management in Power & Energy Systems Dong Wang,Shun-Peng Zhu,Xiancheng Zhang,Gang Chen,José A.F.O. Correia,Guian Qian,2019-11-21 The idea of preparing an Energies Special Issue on Structural Prognostics and Health Management in Power Energy Systems is to compile information on the recent advances in structural prognostics and health management SPHM Continued improvements on SPHM have been made possible through advanced signature analysis performance degradation assessment as well as accurate modeling of failure mechanisms by introducing advanced mathematical approaches tools Through combining deterministic and probabilistic modeling techniques research on SPHM can provide assurance for new structures at a design stage and ensure construction integrity at a fabrication phase Specifically power and energy system failures occur under multiple sources of uncertainty variability resulting from load variations in usage material properties geometry variations within tolerances and other uncontrolled variations Thus advanced methods and applications for theoretical numerical and experimental contributions that address these issues on SPHM are desired and expected which attempt to prevent overdesign and unnecessary inspection and provide tools to enable a balance between safety and economy to be achieved This Special Issue has attracted submissions from China USA Portugal and Italy A total of 26 submissions were received and 11 articles finally published
