GINI COURTER AND ANNETTE MARQUIS, TRIAD CONSULTING

**Description:** If you have lots of data in Excel and need to better understand or present the data, an Excel PivotTable may be the tool you need. With pivot tables, you can easily summarize vast amounts of data by date or other groupings, combine and compare data in a table, and rotate (pivot) the table's rows and columns to see different summaries in a flash. In this session, you'll learn how to:

- Create pivot tables using the PivotTable Wizard
- Modify a pivot table
- AutoFormat a pivot table
- Apply conditional formatting
- Create a pivot chart
- Change the summarization method for table data
- Modify pivot table field names
- Create separate pivot tables for each of the values in a column

You've heard of pivot tables – maybe you've even tried to create one, but needed help to be successful. When you leave this session, you will be able to create and use a pivot table to answer critical questions about your organization.

## UNDERSTANDING PIVOT TABLE AND PIVOT CHART REPORTS

A pivot table report summarizes the columns of information in a database in relationship to each other. A pivot chart is the graphical representation of a pivot table. When you need to present thousands of rows of data in a meaningful fashion, you need a pivot table.
