Ghost Marine Oil Spills Amran Al-Kamzari, Tim Gray, Grant Burgess, Clare Fitzsimmons, 2025-02-05 This book investigates the problem of ghost or untraceable small scale oil spills at sea Ghost spills which are spills for which the spillers cannot be traced are much more common than traceable spills and small scale spills are much more common than large scale spills This is something of a unique study as the subject of small scale ghost spills is very much under researched despite its importance Small scale ghost spills cause a significant amount of ecological environmental economic and social damage and are a violation of environmental justice because the perpetrators escape having to pay for clean up and compensation Instead of the polluter paying the polluted coastal communities which are often impoverished end up bearing these costs This is clearly unfair The Musandam Peninsula serves as a case study because of its strategic location in the Strait of Hormuz a major oil transport route in the Arabian Gulf Residents report that oil slicks and tar balls on Musandam's coast result from tanker and ship discharges in the Strait of Hormuz There are compensation schemes available to meet the costs of marine oil spills but they generally require proof that a spill has been caused by a vessel and such proof is very hard to obtain in the case of small scale ghost spills The stakeholders interviewed in this study emphasized the need for greater community involvement in decision making over dealing with small scale ghost spills The book could be adopted as recommended reading for MSC modules on Marine Pollution Control Environmental Impact of Oil Spills Maritime Law Environmental Regulations and Coastal Management and Conservation

Marine Pollution - Monitoring, Management and Mitigation Amanda Reichelt-Brushett, 2023-05-11 The study of marine environments inevitably involves considering the problem of marine pollution which includes questions that focus on the essential need to ensure the long term health of these exceptional ecosystems and the lives and livelihoods they support The open access textbook Marine Pollution monitoring management and mitigation approaches these questions in a practical and highly readable format It gives newcomers to the field background and perspective through the first comprehensive multidisciplinary exploration of the topic The topic is indeed complex requiring the integration of the natural sciences and chemistry with management policymakers industry and all of us who are users of the marine environment The textbook was written by leading experts to especially prepare graduates for a career in marine pollution studies At the same time it is relevant for anyone invested in the marine environment with a will to reduce their impacts The chapters can easily be used independently and are also connected through the cross referencing of related content The introductory chapter provides a historical account of marine pollution and explores the fundamental physicochemical conditions of seawater Two full chapters cover the requisite resources for ensuring success in field and laboratory studies Then chapter by chapter the book dives into the various types of marine pollutants In closing it discusses the challenges of understanding multiple stressors and presents mitigation and restoration practices along with a global overview of marine pollution legislation We envisioned this textbook as being open access for the very reason we

created it this topic calls for global contributions and champions and financial restraints should not limit access to this knowledge

Life In A Changing Ocean, The: The Fate Of Marine Organisms And Processes Under Climate Change And Other Types Of Human Perturbation M Debora Iglesias-rodriguez, 2019-12-24

This book brings together the state of our knowledge on the interactions between climate change and marine biota. It focusses broadly on the environmental stressors during the Anthropocene period when human activities started to have a significant global impact on earth's geological imprint and ecosystems. This period of rapid change is accompanied by rising carbon dioxide levels, increasing global temperatures, loss of oxygen in aquatic systems, and the fast release of pollutants into the environment among many other environmental stressors originating from large scale human activities such as widespread overfishing. The Future of Marine Life in a Changing Ocean starts by providing the reader with a brief background on fundamental concepts in ocean science and climate. It then moves on to a brief description of recent changes in marine chemistry such as ocean acidification, a decline in oxygen levels in the oceans, ocean warming, and marine pollution, with some examples of shifts in ecosystem diversity. The chapters discuss these topics in the context of how a changing ocean impacts ecosystem health, the biological carbon pump, the sequestration of carbon dioxide from the surface ocean into the deep sea, and the perceived notion of the ocean's unlimited resilience to maintain its role as a carbon reservoir. Topics include threats to marine diversity, ecosystem function, latitudinal shifts in productivity and diversity, and changes in global cycling of elements such as carbon. It concludes with an analysis of the impact of climate change on food security. Written for undergraduate and graduate students and researchers in the natural and social sciences, this book provides a science background to study environmental change in marine ecosystems as well as a science framework to study policy, marine law, and the economics of climate change. This book is an essential read for anyone hoping to understand key challenges facing our oceans.
