Oil Spill Dispersants Clayton/Payne, 2020-08-26 *Oil Spill Dispersants Mechanisms of Action and Laboratory Tests* provides a comprehensive summary of current information available regarding the general formulation of commercial dispersants and their function to lower oil water interfacial tension. The book considers how chemical dispersants work for oil spills, the properties and chemistry of oils including weathering state, the variables that affect dispersant performance, and the relationships between laboratory methods and field situations. The book also considers the strengths and limitations of specific laboratory tests, including brief discussions of the applicability of results for estimating dispersant performance in field trials or conditions encountered during real spill events. Laboratory tests are separated into four groups: tank tests, shake flask tests, interfacial surface tension tests, and flume tests. Rapid screen field tests are considered as a separate group. Recommendations for improvements in future laboratory testing are offered as well. *Oil Spill Dispersants* will be useful for regulators evaluating dispersant agents, field personnel involved with using dispersants, laboratory scientists studying performance and behavior of oil and dispersants, and managers responsible for designing studies related to the treatment of oil slicks with dispersants.

Oil Spill Science and Technology Mervin Fingas, 2010-12-03 The National Academy of Sciences estimate that 1.7 to 8.8 million tons of oil are released into world's water every year, of which more than 70% is directly related to human activities. The effects of these spills are all too apparent: dead wildlife, oil-covered marshlands, and contaminated water, chief among them. This reference will provide scientists, engineers, and practitioners with the latest methods used for identifying and eliminating spills before they occur and developing the best available techniques, equipment, and materials for dealing with oil spills in every environment. Topics covered include spill dynamics and behaviour, spill treating agents, and cleanup techniques such as in situ burning, mechanical containment, or recovery, chemical, and biological methods.
