

Lubrication

OF YOUR CHEVROLET

ENGINE

The crankcase of the engine, as delivered to you, is filled with a light body "breaking-in" oil. Use this oil only during the first 500 miles. Check frequently and maintain the proper level. If it is necessary to add oil, use nothing heavier than SAE 10W Oil. At the end of the first 500 miles drain the breaking-in oil from the crankcase—when hot—and refill with the grade and type indicated below.

GRADES OF OIL

If You Anticipate That the Lowest Atmospheric Temperature Will Be

Not lower than 32° F. above zero
Not lower than 10° F. above zero
Not lower than 10° F. below zero
Below 10° F. below zero

Use Viscosity Grade

SAE 20W or SAE 20
SAE 20W
SAE 10W
SAE 5W (see note)

Note: SAE 5W oils are particularly advantageous during low temperatures because of their easy starting and quick-flow characteristics. The easy starting characteristics of these oils greatly reduce the drain on the battery in cold weather.

At engine operating temperatures, the SAE 5W oils designated "For Service MS" are similar in viscosity, or body, to high quality SAE 10W oils and give equivalent lubrication protection and oil economy.

These oils are intended for use under all operating conditions and atmospheric temperatures that may be encountered when below zero temperatures are expected—they may be retained in the crankcase during the warmer days that occur during the winter season.
