America's New Map Thomas P.M. Barnett,2023-09-26 Three tectonic and inevitable shifts have left the world at a crossroads North America is poised to either re emerge as a global leader or turn back in time ceding power and influence to competitors The 21st century unleashed unprecedented changes across the globe to its climate to the demographic makeup of its nations and to the very nature of allegiance in the digital age With its global influence waning America must reevaluate its approach to globalization if it wishes to remain a leader In America s New Map Restoring Global Leadership in an Era of Climate Change and Demographic Collapse Thomas P M Barnett bestselling author of The Pentagon s New Map War and Peace in the Twenty First Century and acclaimed geo strategist offers seven throughlines to frame and redefine the ambitions and posture of these United States setting our Union on a bold but entirely familiar national trajectory In these pages Barnett offers a deep yet accessible dive into the three shifts that have lead us to this point As climate change ravages countries closest to the equator global dynamics are shifting from an East West emphasis to North South in the greatest geopolitical transformation our world has yet experienced and the Western Hemisphere is far better positioned to exploit this radical reorientation than the East Aging demographics worldwide favor more slowly aging nations including the US while challenging rapidly aging nations like China incentivizing countries best to delay that transition by integrating younger faster growing populations into their ranks In combination these two tectonic forces collide with a third the exploding consumption of an expanding and now majority global middle class the bulk of whom reside along the increasingly unstable North South frontier Taking every variable of these unique circumstances into account America s New Map charts a path toward a bigger

and better United States We will all be living in somebody's world come mid century this book tells Americans how to make sure it is one we can recognize as our own **The Automobile and American Life, 2d ed.** John Heitmann, 2018-08-03

Now revised and updated this book tells the story of how the automobile transformed American life and how automotive design and technology have changed over time It details cars inception as a mechanical curiosity and later a plaything for the wealthy racing and the promotion of the industry Henry Ford and the advent of mass production market competition during the 1920s the development of roads and accompanying highway culture the effects of the Great Depression and World War II the automotive Golden Age of the 1950s oil crises and the turbulent 1970s the decline and then resurgence of the Big Three and how American car culture has been represented in film music and literature Updated notes and a select bibliography serve as valuable resources to those interested in automotive history *Congressional Oversight Panel September*

It is difficult to find an area of public policy more plagued by misunderstanding than energy policy Even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather This book helps set the record straight Not convinced Consider some of these inconvenient truths The cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate Germany the world's leader in solar energy will spend more than 280 billion by 2030 on solar subsidies But all of that investment will only forestall 22nd century global warming by 37 hours Obamas carbon tax would cost Americans 1.2 trillion over just ten years But it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0.038 degrees Celsius At their current emissions growth rate it will take China nine months to replace the entire U.S. emissions cut that Obama wants to achieve over seven years at a staggering cost in American jobs and lost economic growth The U.S. biofuel program imposes a

cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive This is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail The world has too many pressing needs For the money Obama squandered on just a single bankrupt crony solar company the U S could have prevented 300 000 childhood malaria deaths in poor countries A thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient Obamas green energy dead end future will be compared to other worthy alternatives Its time to end the hysterical climate cynicism and get on humanitys side
