IBM Business Process Manager V7.5 Performance Tuning and Best Practices IBM Business Process Management Performance Team, IBM Redbooks, 2012-04-11 This IBM Redpaper™ publication provides performance tuning tips and best practices for IBM Business Process Manager BPM V7.5 all editions and IBM Business Monitor V7.5. These products represent an integrated development and runtime environment based on a key set of service-oriented architecture (SOA) and business process management technologies. Such technologies include Service Component Architecture (SCA), Service Data Object (SDO), Business Process Execution Language for Web services (BPEL), and Business Processing Modeling Notation (BPMN). Both BPM and Business Monitor build on the core capabilities of the IBM WebSphere Application Server infrastructure. As a result, BPM solutions benefit from tuning configuration and best practices information for WebSphere Application Server and the corresponding platform Java Virtual Machines (JVMs). This paper targets a wide variety of groups both within IBM development services, technical sales, and others and customers. For customers who are either considering or are in the early stages of implementing a solution incorporating BPM and Business Monitor, this document proves a useful reference. The paper is useful both in terms of best practices during application development and deployment and as a reference for setup, tuning, and configuration information.
