Mechanical Engineering And Control Systems - Proceedings Of 2015 International Conference (Mecs2015) Xiaolong Li, 2016-01-15 This book consists of 113 selected papers presented at the 2015 International Conference on Mechanical Engineering and Control Systems MECS2015 which was held in Wuhan China during January 23 25 2015 All accepted papers have been subjected to strict peer review by two to four expert referees and selected based on originality ability to test ideas and contribution to knowledge MECS2015 focuses on eight main areas namely Mechanical Engineering Automation Computer Networks Signal Processing Pattern Recognition and Artificial Intelligence Electrical Engineering Material Engineering and System Design The conference provided an opportunity for researchers to exchange ideas and application experiences and to establish business or research relations finding global partners for future collaborations The conference program was extremely rich profound and featured high impact presentations of selected papers and additional late breaking contributions

Geoforming Mars Robert Malcuit, 2020-11-25 This book offers an exercise in theoretical planetology presenting five different scenarios to assess the evolution of habitable conditions on Mars to assess planetary terraforming potential and to give insight into the ongoing search for habitable exoplanets Four of the scenarios involve Martian satellite capture models in which gravitational capture via tidal deformation and energy dissipation processes are measured to predict a pathway of biological evolution while the fifth scenario analyzes the possible model that led to the Mars that we have today i.e. with no life forms In ten chapters readers will learn how a Mars like terrestrial planet can be transformed into a habitable planet and what conditions must be assessed when searching for exoplanets in a star centered orbit to support life The book is intended for planetologists and general enthusiasts of planetary evolution and our solar system

Algebra and its Applications Syed Tariq Rizvi, Asma Ali, Vincenzo De Filippis, 2016-11-18 This book discusses recent developments and the latest research in algebra and related topics The book allows aspiring researchers to update their understanding of prime rings generalized derivations generalized semiderivations regular semigroups completely simple semigroups module hulls injective hulls Baer modules extending modules local cohomology modules orthogonal lattices Banach algebras multilinear polynomials fuzzy ideals Laurent power series and Hilbert functions All the contributing authors are leading international academicians and researchers in their respective fields Most of the papers were presented at the international conference on Algebra and its Applications ICAA 2014 held at Aligarh Muslim University India from December 15 17 2014 The book also includes papers from mathematicians who couldn't attend the conference The conference has emerged as a powerful forum offering researchers a venue to meet and discuss advances in algebra and its applications inspiring further research directions

Science Fiction and Narrative Form David Roberts, Andrew Milner, Peter Murphy, 2023-02-23 Establishing science fiction as its own distinct and increasingly important narrative form this book explores how the genre challenges pervasive perceptions of society as they appear in the

conventional modern novel Inspired by and building upon Georg Lukács's criticism of the orthodox novel for its depiction of life as alienating and disjointed Milner Murphy and Roberts demonstrate that science fiction steps beyond this contemporary form to be a more constructive form of literature one able to conceive of society as complete integrated and well rounded Taking stock of three kinds of science fiction which lie outside the scope of the modern novel theological ontological science fiction the science fiction of future history and epic science fiction this book demonstrates the genre's unique capacity to encapsulate the whole world persons and events things and objects in a glance and address the motive behind the longing for meaningful totality With reference to a vast array of works by authors such as Michel Houellebecq Elias Canetti Isaac Asimov Jules Verne H G Wells Aldous Huxley Marge Piercy Iain M Banks Margaret Atwood Ursula K Le Guin William Gibson Dirk C Fleck Philip K Dick George Orwell and Kazuo Ishiguro this book offers a compelling argument for rethinking the position and potential of the science fiction novel and to challenge the way we perceive our culture Handbook of Systems Engineering

The Earth Manfred Gottwald, 2024-11-30 About 80 years ago it was possible for the first time to confirm what modern science had suggested for centuries Earth shows its sphericity based on a curved horizon The following age of space flights opened other opportunities First our home planet could be observed from low Earth orbits and then a while later even from the distance of the Moon Interplanetary space flights even shifted our perspective out into the universe Images sent back from many spacecraft showed how Earth and its Moon are part of the solar system This book is a journey away from Earth but always looking back at it The journey starts with balloon flights reaching the stratosphere followed by the tedious attempts to reach space When space flight in low Earth orbits had been achieved frequent unmanned and manned missions covered that region Further milestones reached geostationary orbit and the Moon Interplanetary missions allowed us to become acquainted with large parts of the solar system They showed us how unique our home planet Earth is A photo from a distance of 6 billion kilometers the famous pale blue dot always reminds us of this fact The translation was done with the help of artificial intelligence The author has subsequently revised the text further in an endeavour to refine the work stylistically

Air Force Magazine ,2005-07 [Queueing Theory 2](#) Vladimir Anisimov, Nikolaos Limnios, 2021-03-05 The aim of this book is to reflect the current cutting edge thinking and established practices in the investigation of queueing systems and networks This second volume includes eight chapters written by experts wellknown in their areas The book conducts a stability analysis of certain types of multiserver regenerative queueing systems a transient evaluation of Markovian queueing systems focusing on closed form distributions and numerical

techniques analysis of queueing models in service sectors using analytical and simulation approaches plus an investigation of probability distributions in queueing models and their use in economics industry demography and environmental studies This book also considers techniques for the control of information in queueing systems and their impact on strategic customer behavior social welfare and the revenue of monopolists In addition applications of maximum entropy methods of inference for the analysis of a stable M/G/1 queue with heavy tails and inventory models with positive service time including perishable items and stock supplied using various algorithmic control policies s/s/r/Q etc

Planetary Astrobiology Victoria Meadows, Giada Arney, Britney Schmidt, David J. Des Marais, 2020-06-16 Are we alone in the universe How did life arise on our planet How do we search for life beyond Earth These profound questions excite and intrigue broad cross sections of science and society Answering these questions is the province of the emerging strongly interdisciplinary field of astrobiology Life is inextricably tied to the formation chemistry and evolution of its host world and multidisciplinary studies of solar system worlds can provide key insights into processes that govern planetary habitability informing the search for life in our solar system and beyond Planetary Astrobiology brings together current knowledge across astronomy biology geology physics chemistry and related fields and considers the synergies between studies of solar systems and exoplanets to identify the path needed to advance the exploration of these profound questions Planetary Astrobiology represents the combined efforts of more than seventy-five international experts consolidated into twenty chapters and provides an accessible interdisciplinary gateway for new students and seasoned researchers who wish to learn more about this expanding field Readers are brought to the frontiers of knowledge in astrobiology via results from the exploration of our own solar system and exoplanetary systems The overarching goal of Planetary Astrobiology is to enhance and broaden the development of an interdisciplinary approach across the astrobiology planetary science and exoplanet communities enabling a new era of comparative planetology that encompasses conditions and processes for the emergence evolution and detection of life

Fungal Infections of the Central Nervous System Mehmet Turgut, Sundaram Challa, Ali Akhaddar, 2019-07-05 This book provides comprehensive information on fungal infections of the central nervous system (CNS) Fungal infections are still a major public health challenge for most of the developing world and even for developed countries due to the rising numbers of immune compromised patients refugee movements and international travel Although fungal infections involving the CNS are not particularly common when they do occur the results can be devastating in spite of recent advances and currently available therapies Further over the past several years the

incidence of these infections has seen a steep rise among immunodeficient patients In this context aggressive surgery remains the mainstay of management but conservative antifungal drug treatment complemented by aggressive surgical debridement may be necessary Yet the optimal management approach to fungal infections of the CNS remains controversial owing to the limited individual experience and the variable clinical course of the conditions Addressing that problem this comprehensive book offers the ideal resource for neurosurgeons neurologists and other specialists working with infectious diseases

Position, Navigation, and Timing Technologies in the 21st Century Y. Jade Morton, Frank van Diggelen, James J. Spilker, Jr., Bradford W. Parkinson, Sherman Lo, Grace Gao, 2021-01-13 Covers the latest developments in PNT technologies including integrated satellite navigation sensor systems and civil applications Featuring sixty four chapters that are divided into six parts this two volume work provides comprehensive coverage of the state of the art in satellite based position navigation and timing PNT technologies and civilian applications It also examines alternative navigation technologies based on other signals of opportunity and sensors and offers a comprehensive treatment on integrated PNT systems for consumer and commercial applications Volume 1 of *Position Navigation and Timing Technologies in the 21st Century Integrated Satellite Navigation Sensor Systems and Civil Applications* contains three parts and focuses on the satellite navigation systems technologies and engineering and scientific applications It starts with a historical perspective of GPS development and other related PNT development Current global and regional navigation satellite systems GNSS and RNSS their interoperability signal quality monitoring satellite orbit and time synchronization and ground and satellite based augmentation systems are examined Recent progresses in satellite navigation receiver technologies and challenges for operations in multipath rich urban environment in handling spoofing and interference and in ensuring PNT integrity are addressed A section on satellite navigation for engineering and scientific applications finishes off the volume Volume 2 of *Position Navigation and Timing Technologies in the 21st Century Integrated Satellite Navigation Sensor Systems and Civil Applications* consists of three parts and addresses PNT using alternative signals and sensors and integrated PNT technologies for consumer and commercial applications It looks at PNT using various radio signals of opportunity atomic clock optical laser magnetic field celestial MEMS and inertial sensors as well as the concept of navigation from Low Earth Orbiting LEO satellites GNSS INS integration neuroscience of navigation and animal navigation are also covered The volume finishes off with a collection of work on contemporary PNT applications such as survey and mobile mapping precision agriculture wearable systems automated driving train control commercial unmanned aircraft systems aviation and navigation in the unique Arctic environment In addition this text Serves as a complete reference and handbook for professionals and students interested in the broad range of PNT subjects Includes chapters that focus on the latest developments in GNSS and other navigation sensors techniques and applications Illustrates interconnecting relationships between various types of technologies in order to assure more protected tough and accurate PNT

Foundations of Colour Science Alexander D. Logvinenko,Vladimir L. Levin,2022-09-22 Presents the science of colour from new perspectives and outlines results obtained from the authors work in the mathematical theory of colour This innovative volume summarizes existing knowledge in the field attempting to

present as much data as possible about colour accumulated in various branches of science physics psychophysics colorimetry physiology from a unified theoretical position Written by a colour specialist and a professional mathematician the book offers a new theoretical framework based on functional analysis and convex analysis Employing these branches of mathematics instead of more conventional linear algebra allows them to provide the knowledge required for developing techniques to measure colour appearance to the standards adopted in colorimetric measurements The authors describe the mathematics in a language that is understandable for colour specialists and include a detailed overview of all chapters to help readers not familiar with colour science Divided into two parts the book first covers various key aspects of light colour such as colour stimulus space colour mechanisms colour detection and discrimination light colour perception typology and light metamerism The second part focuses on object colour featuring detailed coverage of object colour perception in single and multiple illuminant scenes object colour solid colour constancy metamer mismatching object colour indeterminacy and more Throughout the book the authors combine differential geometry and topology with the scientific principles on which colour measurement and specification are currently based and applied in industrial applications Presents a unique compilation of the author's substantial contributions to colour science Offers a new approach to colour perception and measurement developing the theoretical framework used in colorimetry Bridges the gap between colour engineering and a coherent mathematical theory of colour Outlines mathematical foundations applicable to the colour vision of humans and animals as well as technologies equipped with artificial photosensors Contains algorithms for solving various problems in colour science such as the mathematical problem of describing metameric lights Formulates all results to be accessible to non mathematicians and colour specialists Foundations of Colour Science From Colorimetry to Perception is an invaluable resource for academics researchers industry professionals and undergraduate and graduate students with interest in a mathematical approach to the science of colour
