drug therapy based on the principle of similars founded by Samuel Hahnemann 1755 1843 in Germany and since then spread  
all over the world has been a controversial system of medicine up to the present While naturalistic and materialistic  
approaches have difficulty to find statistical evidence of efficacy and a plausible mechanism of action scientific research in  
terms of the humanities may grasp many more aspects of this kind of medical art The present volume contains a variety of  
articles outlining and evaluating homeopathy from a plurality of perspectives such as philosophy history and theory of  
science history and theory of medicine social history history of ideas institutions politics religion and economics thus shedding  
new light on its status within medicine at large In addition to these contributions from cultural human or moral studies to  
complete the methodological spectrum one of the world s top rated randomized clinical trials on homeopathy is presented  
here As it turns out a balanced judgement of homeopathy may require the consideration of more than just a few of its many
