Undergraduate and graduate students, dermatologists and general practitioners who study and/or work in the area will find scientific support in this book which is intended as a reference work for dermatological practice and public health. The book has ten sections addressing carefully selected topics including: 1 concepts in dermatoepidemiology and the international strategies in programs of Public Health; 2 the most significant skin diseases including dermatology in tropical medicine; 3 diseases that are not primarily dermatological but have a high impact on public health and may have skin and mucosal manifestations; 4 a number of emerging issues in dermatology in public health; 5 clinical approaches: diagnosis and management of common dermatological symptoms; and 6 multidisciplinary approaches in dermatology. The editors have brought together authors with extensive experience in their respective fields in order to provide a reference book for those involved in or with an interest in the relationship between dermatology and public health.
