Computer Applications in Fermentation Technology: Modelling and Control of Biotechnological Processes N. M. Fish,2012-12-06 Richard Fox Chairman Scientific Programme Committee Between 25th and 29th September 1988 243 people who either apply or research the use of computers in fermentation gathered together at Robinson College Cambridge UK They came from 30 countries The conference brought together two traditions Firstly it continued the series on Computer Applications in Fermentation Technology ICCAFT inaugurated by Henri Blanchere in Dijon in 1973 and carried forward in Philadelphia and Manchester Secondly it brought the expertise of the many members of the International Federation of Automatic Control IFAC who focused their attention on biotechnology at Noordwijkerhout in the Netherlands in December 1985 I am happy to say that the tradition carries on and a successor meeting will hopefully take place in the USA in 1991 If you find these proceedings useful or stimulating then we hope to see you there We set out to make ICCAFT4 a close knit friendly conference We housed all who cared to in Robinson College itself and organised no parallel sessions Because we the organisers experience difficulty with the jargon of our colleagues from other disciplines we asked Bruce Beck to present a breakfast tutorial on modern control and modelling techniques and we set up informal panel discussions after dinner on two evenings Neville Fish chaired a forum on the microbiological principles behind models while Professors Derek Linkens and Ron Leigh led a discussion on expert systems in control *Semiconductor International* ,1985 **Developmental and Acquired Mechanisms of Calcific Aortic Valve Disease** Joy Lincoln,Lakshmi Prasad Dasi,Katherine Yutzey,2023-03-01

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2008 Dimitris N. Metaxas,2008 Annotation The two volume set LNCS 5241 and LNCS 5242 constitute the refereed proceedings of the 11th International Conference on Medical Image Computing and Computer Assisted Intervention MICCAI 2008 held in New York NY USA in September 2008

The program committee carefully selected 258 revised papers from numerous submissions for presentation in two volumes based on rigorous peer reviews. The first volume includes 127 papers related to medical image computing, segmentation, shape and statistics analysis, modeling, motion tracking and compensation as well as registration. The second volume contains 131 contributions related to robotics and interventions, statistical analysis, segmentation, intervention modeling and registration.

Microtubules and Microtubule Inhibitors, 1985 M. de Brabander, Jan de Mey, 1985 The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports David Martín Hidalgo, 2021-08-16

Nowadays assisted reproductive technologies (ARTs) have a pivotal role not only in achieving fertilization in subfertile animals but they are also involved in the management of the herd, decreasing disease spread and even allowing offspring sex selection. Nonetheless, there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties. This Special Issue titled *The Era of Assisted Reproductive Technologies Tailored to the Specific Necessities of Species, Industry and Case Reports* and published in *Animals* is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes, mainly focused on farm animals such as horse, pig, bovine, rabbit and ovine species. Thus, the Special Issue covers information from the classical point of view, including comparative studies of different semen extenders to the most advanced technologies of sperm selection by thermotaxis or chemoattractants as well as the improvement of sperm features by red light irradiation. The female and embryo contributions to ART outcomes are also covered, for instance, with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes. In brief, this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve, improve, rescue or even create fertility for domestic farm animals with high economic impact.

Animal model studies on viral infections Akio Adachi, Tomoyuki Miura, 2015-03-13

Understanding viral replication and pathogenicity properties in infected individuals is a major mission of animal virology. Animal models are essential to analyze the *in vivo* viral characteristics and to develop countermeasures against viruses. To fight against a wide variety of viruses, basic studies with specific and/or common approaches are required. This Research Topic collects articles that describe studies on numerous virus species at various stages toward animal experiments: i) description/evaluation of new challenges of animal model studies; ii) experimental material/methods for animal model studies; iii) observations for upcoming animal model studies. Numbers of DNA and RNA viruses such as HHV-6, HPV, Ebola virus, HCV, dengue virus, HTLV-1, HIV-1, SIV and measles virus are covered by this special issue, consisting of original research, methods, review, mini-review and opinion articles.
