Ora Laboratory Procedure:

Handbook of Analytical Validation Michael E. Swartz, Ira S. Krull, 2012-04-24 Written for practitioners in both the drug and biotechnology industries the Handbook of Analytical Validation carefully compiles current regulatory requirements on the validation of new or modified analytical methods Shedding light on method validation from a practical standpoint the handbook Contains practical up to date guidelines for analytical method validation Summarizes the latest regulatory requirements for all aspects of method validation even those coming from the USP but undergoing modifications Covers development optimization validation and transfer of many different types of methods used in the regulatory environment Simplifying the overall process of method development optimization and validation the guidelines in the Handbook apply to both small molecules in the conventional pharmaceutical industry as well as the biotech industry

Total Diet Studies Gerald G. Moy, Richard W. Vannoort, 2013-11-08 Unless a food is grossly contaminated consumers are unable to detect through sight or smell the presence of low levels of toxic chemicals in their foods Furthermore the toxic effects of exposure to low levels of chemicals are often manifested slowly sometimes for decades as in the case of cancer or organ failure As a result safeguarding food from such hazards requires the constant monitoring of the food supply using sophisticated laboratory analysis While the food industry bears the primary responsibility for assuring the safety of its products the overall protection of people's diets from chemical hazards must be considered one of the most important public health functions of any government Unfortunately many countries do not have sufficient capability and capacity to monitor the exposure of their populations to many potentially toxic chemicals that could be present in food and drinking water Without such monitoring public health authorities in many countries are not able to identify and respond to problems posed by toxic chemicals which may harm their population and undermine consumer confidence in the safety of the food supply From a trade perspective those countries that cannot demonstrate that the food they produce is free of potentially hazardous chemicals will be greatly disadvantaged or even subject to sanctions in the international marketplace The goal of a total diet study TDS is to provide basic information on the levels and trends of exposure to chemicals in foods as consumed by the population In other words foods are processed and prepared as typical for a country before they are analyzed in order to better represent actual dietary intakes Total diet studies have been used to assess the safe use of agricultural chemicals e.g. pesticides antibiotics food additives e.g. preservatives sweetening agents environmental contaminants e.g. lead mercury arsenic cadmium PCBs dioxins processing contaminants e.g. acrylamide polycyclic aromatic hydrocarbons chloropropanols and natural contaminants e.g. aflatoxin patulin other mycotoxins by determining whether dietary exposure to these chemicals are within acceptable limits Total diet studies can also be applied to certain nutrients where the goal is to assure intakes are not only below safe upper limits but also above levels deemed necessary to maintain good health International and national organizations such as the World Health Organization the European Food Safety Agency and the US Food and Drug

Administration recognize the TDS approach as one of the most cost effective means of protecting consumers from chemicals in food for providing essential information for managing food safety including food standards and for setting priorities for further investment and study Total Diet Studies introduces the TDS concept to a wider audience and presents the various steps in the planning and implementation of a TDS It illustrates how TDSs are being used to protect public health from chemicals in the food supply in many developed and developing countries The book also examines some of the applications of TDSs to specific chemicals including contaminants and nutrients

Bayesian Analysis with R for Drug Development Harry Yang, Steven Novick, 2019-06-26 Drug development is an iterative process The recent publications of regulatory guidelines further entail a lifecycle approach Blending data from disparate sources the Bayesian approach provides a flexible framework for drug development Despite its advantages the uptake of Bayesian methodologies is lagging behind in the field of pharmaceutical development Written specifically for pharmaceutical practitioners Bayesian Analysis with R for Drug Development Concepts Algorithms and Case Studies describes a wide range of Bayesian applications to problems throughout pre clinical clinical and Chemistry Manufacturing and Control CMC development Authored by two seasoned statisticians in the pharmaceutical industry the book provides detailed Bayesian solutions to a broad array of pharmaceutical problems Features Provides a single source of information on Bayesian statistics for drug development Covers a wide spectrum of pre clinical clinical and CMC topics Demonstrates proper Bayesian applications using real life examples Includes easy to follow R code with Bayesian Markov Chain Monte Carlo performed in both JAGS and Stan Bayesian software platforms Offers sufficient background for each problem and detailed description of solutions suitable for practitioners with limited Bayesian knowledge Harry Yang Ph D is Senior Director and Head of Statistical Sciences at AstraZeneca He has 24 years of experience across all aspects of drug research and development and extensive global regulatory experiences He has published 6 statistical books 15 book chapters and over 90 peer reviewed papers on diverse scientific and statistical subjects including 15 joint statistical works with Dr Novick He is a frequent invited speaker at national and international conferences He also developed statistical courses and conducted training at the FDA and USP as well as Peking University Steven Novick Ph D is Director of Statistical Sciences at AstraZeneca He has extensively contributed statistical methods to the biopharmaceutical literature Novick is a skilled Bayesian computer programmer and is frequently invited to speak at conferences having developed and taught courses in several areas including drug combination analysis and Bayesian methods in clinical areas Novick served on IPAC RS and has chaired several national statistical conferences
