Study Tip

The central dogma of biology validates the importance of the Miller-Urey experiment: DNA transcribes into RNA, which translates into amino acids, which combine to form proteins, the building blocks of life.

Amino acids form polypeptide chains

Amino Acids

- **Amino acids** are the building blocks of life because they create proteins
 - Linked together by covalent bonds to form polymers called polypeptide chains
- Proteins are the most abundant class of biological molecules
- Miller-Urey Experiment
 - Placed hydrogen, methane, and ammonia in a flask of heated water that created water vapor, which was called primordial soup and simulated the Earth's early atmosphere. Sparks simulated lightning, and the gases combined to form water-soluble organic compounds including amino acids
