## **Out Of The Mainstream Water Rights Politics And Identity:**

**Out of the Mainstream** Rutgerd Boelens, David Getches, Armando Guevara-Gil, 2010-02-26 Water is not only a source of life and culture. It is also a source of power, conflicting interests, and identity battles. Rights to materially access, culturally organize, and politically control water resources are poorly understood by mainstream scientific approaches and hardly addressed by current normative frameworks. These issues become even more challenging when law and policy makers and dominant power groups try to grasp, contain, and handle them in multicultural societies. The struggles over the uses, meanings, and appropriation of water are especially well illustrated in Andean communities and local water systems of Peru, Chile, Ecuador, and Bolivia, as well as in Native American communities in south western USA. The problem is that throughout history, these nation states have attempted to civilize and bring into the mainstream the different cultures and peoples within their borders, instead of understanding context and harnessing the strengths and potentials of diversity. This book examines the multi-scale struggles for cultural justice and socio-economic redistribution that arise as Latin American communities and user federations seek access to water resources and decision-making power regarding their control and management. It is set in the dynamic context of unequal globalizing power relations, politics of scale, and identity, environmental encroachment, and the increasing presence of extractive industries that are creating additional pressures on local livelihoods. While much of the focus of the book is on the Andean Region, a number of comparative chapters are also included. These address issues such as water rights and defence strategies in neighbouring countries and those of Native American people in the southern USA, as well as state reform and multi-culturalism across Latin and Native America, and the use of international standards in struggles for indigenous water rights. This book shows that against all odds, people are actively contesting neoliberal globalization and water power plays. In doing so, they construct new hybrid water rights systems, livelihoods, cultures, and hydro-political networks, and dynamically challenge the mainstream powers and politics. Water Security, Justice and the Politics of Water Rights in Peru and Bolivia Miriam Seemann, 2016-04-08 The author scrutinizes the claim of policy makers and experts that legal recognition of local water rights would reduce water conflict and increase water security and equality for peasant and indigenous water users. She analyzes two distinct top-down and bottom-up formalization policies in Peru and Bolivia: neoliberal, the former indigenist, socialist, the latter. The policies have intended and unintended consequences and impact on marginalized peasants and the complex inter-legal systems for providing water security on the ground. This study seeks to debunk the official myth of the need to create state-centric top-down legal security in complex pluralistic water realities. The engagement between formal and alternative water securities and controversial notions of rightness is interwoven and contested. A complex setting is unveiled that forbids one-size-fits-all solutions. Peru's and Bolivia's case studies demonstrate how formalization policies, while aiming to enhance inclusion in practice, actually reinforce exclusion of the marginalized. Water rights formalization is certainly no panacea. **Water, Power and Identity** Rutgerd

Boelens,2015-04-10 This book addresses two major issues in natural resource management and political ecology the complex conflicting relationship between communities managing water on the ground and national global policy making institutions and elites and how grassroots defend against encroachment question the self evidence of State market based water governance and confront coercive and participatory boundary policing normal vs abnormal The book examines grassroots building of multi layered water rights territories and State market and expert networks vigorous efforts to reshape these water societies in their own image seizing resources and or aligning users identities and rights systems within dominant frameworks Distributive and cultural politics entwine It is shown that attempts to modernize and normalize users through universalized water culture rational water use and de politicized interventions deepen water security problems rather than alleviating them However social struggles negotiate and enforce water rights User collectives challenge imposed water rights and identities constructing new ones to strategically acquire water control autonomy and re moralize their waterscapes The author shows that battles for material control include the right to culturally define and politically organize water rights and territories Andean illustrations from Peru Ecuador Bolivia and Chile from peasant indigenous life stories to international policy making highlight open and subsurface hydro social networks They reveal how water justice struggles are political projects against indifference and that engaging in re distributive policies and defying truth politics extends context particular water rights definitions and governance forms

### **Unstable Relations**

Eve Vincent, Timothy Neale, 2016 The 1970s witnessed the emergence of a global environmental movement in response to rampant resource extraction This moment gave rise to a celebrated green black alliance between environmentalists and Indigenous groups in Australia However in recent years this relationship has come under increased critical scrutiny spurred in part by the global mining boom and continuing concerns about the effects of climate change This edited collection brings together leading anthropologists social scientists activists and writers to subject the Indigenous environmentalist relation to rigorous empirical inquiry and to explore noted controversies campaigns and key issues such as the Wild Rivers Act and James Price Point mining native title rights feral species forestry national parks and payment for environmental services The insights generated here have relevance beyond Australia as scholars investigate the politics of indigeneity in the present moment and consider the economic future of Indigenous minorities Significantly the collection involves both Indigenous and non Indigenous authors subjecting environmentalists to a kind of anthropological analysis Subject Environmental Studies Politics Indigenous Studies

### **Water Governance in the Face of Global Change**

Claudia Pahl-Wostl, 2015-09-04 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike

### **Negotiating Water**

**Governance** Emma S. Norman, Christina Cook, 2016-03-09 Those who control water hold power Complicating matters water is a flow resource constantly changing states between liquid solid and gas being incorporated into living and non living things and crossing boundaries of all kinds As a result water governance has much to do with the question of boundaries and scale who is in and who is out of decision making structures Which of the many boundaries that water crosses should be used for decision making related to its governance Recently efforts to understand the relationship between water and political

boundaries have come to the fore of water governance debates how and why does water governance fragment across sectors and governmental departments How can we govern shared waters more effectively How do politics and power play out in water governance This book brings together and connects the work of scholars to engage with such questions The introduction of scalar debates into water governance discussions is a significant advancement of both governance studies and scalar theory decision making with respect to water is often implicitly a decision about scale and its related politics When water managers or scholars explore municipal water service delivery systems argue that integrated approaches to salmon stewardship are critical to their survival query the damming of a river to provide power to another region and investigate access to potable water they are deliberating the politics of scale Accessible engaging and informative the volume offers an overview and advancement of both scalar and governance studies while examining practical solutions to the challenges of water governance *The Routledge Companion to Environmental Ethics* Benjamin Hale,Andrew Light,Lydia

**Transferable Groundwater Rights** Andreas N. Charalambous, 2013-10-28 The principle of transferable groundwater rights is that by making water rights capable of being traded in the market water resources can be used more sustainably and efficiently Groundwater would achieve its economic value by switching from the high volume low value irrigation which is prevalent with many farmers particularly in South Asia to low volume high value urban supply or the growing of intensive horticultural or cash crops This book discusses transferable groundwater rights in their broader context It starts with a detailed description of the physical aspects of groundwater which non technical readers should find useful followed by a discussion of legal and economic aspects Water transfers and the international experiences in transferable groundwater rights are dealt with in detail in two subsequent chapters A model is presented to guide those involved in water resources management and planning in their decision process to introduce transferable groundwater rights and water rights trading The author concludes that transferable groundwater rights potentially offer a better alternative to land based water

rights systems However he casts serious doubt on whether groundwater rights trading on its own can achieve water resources sustainability environmental protection and social equity Government intervention seems to be almost always needed to assist the water rights market and take responsibility for any of its adverse consequences *The Anthropology of Resource Extraction* Lorenzo D'Angelo, Robert Jan Pijpers, 2022-01-13 This book offers an overview of the key debates in the burgeoning anthropological literature on resource extraction Resources play a crucial role in the contemporary economy and society are required in the production of a vast range of consumer products and are at the core of geopolitical strategies and environmental concerns for the future of humanity Scholars have widely debated the economic and sociological aspects of resource management in our societies offering interesting and useful abstractions However anthropologists offer different and fresh perspectives sometimes complementary and at other times alternative to these abstractions based on field researches conducted in close contact with those actors individuals as well as groups and institutions that manipulate anticipate fight for or resist the extractive processes in many creative ways Thus while addressing questions such as What characterizes the anthropology of resource extraction What topics in the context of resource extraction have anthropologists studied and What approaches and insights have emerged from this this book synthesizes and analyses a range of anthropological debates about the ways in which different actors extract use manage and think about resources This comprehensive volume will serve as a key reading for scholars and students within the social sciences working on resource extraction and those with an interest in natural resources environment capitalism and globalization It will also be a useful resource for practitioners within mining and development Water Katie Meehan, Naho Mirumachi, Alex Loftus, Majed Akhter, 2023-02-08 Discover the hydrosocial cycle and the impact of power knowledge and scarcity on water rights and use through this engaging and student friendly textbook In *Water A Critical Introduction* a team of distinguished researchers delivers an expert examination of our most pressing water related challenges arguing that flows of water are shaped by social practices and geometries of power Combining first hand research and headline case studies the authors reveal the hydrosocial relations often hidden in mainstream accounts of water delving into current issues like water scarcity floods global water governance legal conflicts human rights potable water provision health the water food energy nexus and much more Spanning five centuries this comprehensive volume reflects on how imperial expansion has shaped hydrosocial relations in and between Europe Asia Africa and the Americas how water demand has changed over time and how this change impacted lifestyle As the first major text to synthesize critical water research in both local and global perspectives this book is anchored by clear and compelling arguments the four planks and supported by the authors original research and up to date synthesis of the latest critical research on major water problems It also includes maps illustrations and additional learning materials to be used by educators Readers will find A lively and thorough introduction that explains why a critical approach is necessary to fully understand our current water challenges with a focus on the skeptical superhero A global
