## **Other Minds Other Minds:**

*Other Minds* Peter Godfrey-Smith, 2016-12-06 Philosopher Peter Godfrey Smith dons a wet suit and journeys into the depths of consciousness in *Other Minds* Although mammals and birds are widely regarded as the smartest creatures on earth it has lately become clear that a very distant branch of the tree of life has also sprouted higher intelligence the cephalopods consisting of the squid the cuttlefish and above all the octopus In captivity octopuses have been known to identify individual human keepers raid neighboring tanks for food turn off lightbulbs by spouting jets of water plug drains and make daring escapes How is it that a creature with such gifts evolved through an evolutionary lineage so radically distant from our own What does it mean that evolution built minds not once but at least twice The octopus is the closest we will come to meeting an intelligent alien What can we learn from the encounter In *Other Minds* Peter Godfrey Smith a distinguished philosopher of science and a skilled scuba diver tells a bold new story of how subjective experience crept into being how nature became aware of itself As Godfrey Smith stresses it is a story that largely occurs in the ocean where animals first appeared Tracking the mind's fitful development Godfrey Smith shows how unruly clumps of seaborne cells began living together and became capable of sensing acting and signaling As these primitive organisms became more entangled with others they grew more complicated The first nervous systems evolved probably in ancient relatives of jellyfish later on the cephalopods which began as inconspicuous mollusks abandoned their shells and rose above the ocean floor searching for prey and acquiring the greater intelligence needed to do so Taking an independent route mammals and birds later began their own evolutionary journeys But what kind of intelligence do cephalopods possess Drawing on the latest scientific research and his own scuba diving adventures Godfrey Smith probes the many mysteries that surround the lineage How did the octopus a solitary creature with little social life become so smart What is it like to have eight tentacles that are so packed with neurons that they virtually think for themselves What happens when some octopuses abandon their hermit like ways and congregate as they do in a unique location off the coast of Australia By tracing the question of inner life back to its roots and comparing human beings with our most remarkable animal relatives Godfrey Smith casts crucial new light on the octopus mind and on our own

*Other Minds* Alec Hyslop, 2013-03-09 This book has been a long time in the making Other issues have taken me away from it from time to extended time But I kept coming back to the problem of other minds It has remained a great issue it is much contested still and it is after all close to us all I like believing that the time taken has deepened my understanding of the problem and how it is to be handled Other people some by disagreeing vehemently have helped greatly I mention in particular Brian Ellis Robert Fox Graeme Marshali Tim Oakley Ray Pinkerton and Robert Young Robert Pargetter argued with me and kept insisting that I write this book John Bigelow Michael Bradley Keith Campbell Frank Jackson and William Lycan assisted by reading an earlier version and providing valued comments Frank Jackson has been specially helpful not just on this topic He can be blamed for initially causing me to take the analogical inference seriously The La Trobe

Philosophy Department has been a good place to do philosophy I am grateful to Suzanne Hayster Sandra Paul and Betty Pritchard for struggling at various times with various recalcitrant manuscripts Most particularly I thank Gai Larkin She has seen the project through with considerably more than efficiency

**Wittgenstein on Other Minds** Constantine Sandis, 2025-03-11 The book brings together Constantine Sandis's essays on Wittgenstein's approach to understanding others Sandis sketches a picture of how his anti-scepticism with regard to the philosophical problem of other minds is not only compatible with but also supported by his scepticism concerning the real-life difficulty of understanding others and being understood by them While each individual essay focuses on particular issues in Wittgenstein including philosophical anthropology interpersonal psychology and animal concepts they collectively paint a picture of what he takes the real problem of other minds to be how to overcome it and the limitations of our understanding Sandis not only offers a fresh exegesis of Wittgenstein's public and private writings on these matters but proceeds to show the relevance of Wittgenstein beyond the academy

**Joint Attention: Communication and Other Minds** Naomi Eilan, Department of Philosophy Naomi Eilan, Christoph Hoerl, Teresa McCormack, Johannes Roessler, 2005-03-03 This book contains research into the cognitive phenomenon of joint attention Philosophical and psychological perspectives on the nature and significance of this phenomenon are examined Provided by publisher

Minding Minds Radu J. Bogdan, 2003-08-11 Drawing on philosophical psychological and evolutionary perspectives Bogdan analyzes how primates create the resources for metamentation the ability of the mind to think about its own thoughts Mental reflexivity or metamentation a mind thinking about its own thoughts underpins reflexive consciousness deliberation self-evaluation moral judgment the ability to think ahead and much more Yet relatively little in philosophy or psychology has been written about what metamentation actually is or about why and how it came about In this book Radu Bogdan proposes that humans think reflexively because they interpret each other's minds in social contexts of cooperation communication education politics and so forth As naive psychology interpretation was naturally selected among primates as a battery of practical skills that preceded language and advanced thinking Metamentation began as interpretation mentally rehearsed through mental sharing of attitudes and information about items of common interest interpretation conspired with mental

rehearsal to develop metamentation Drawing on philosophical psychological and evolutionary perspectives Bogdan analyzes the main phylogenetic and ontogenetic stages through which primates abilities to interpret other minds evolve and gradually create the opportunities and resources for metamentation Contrary to prevailing views he concludes that metamentation benefits from but is not a predetermined outcome of logical abilities language and consciousness

A Refutation of Positivism in Philosophy of Mind Pieter A.M. Seuren, 2023-05-05 This book argues that positivism though now the dominant paradigm for both the natural and the human sciences is intrinsically unfit for the latter In particular it is unfit for linguistics and cognitive science where it is ultimately self destructive since it fails to account for causality while the mind the primary object of research of the human sciences cannot be understood unless considered to be an autonomous causal force Author Pieter Albertus Maria Seuren who died shortly after this manuscript was finished and after a remarkable career reviews the history of this issue since the seventeenth century He focuses on Descartes Leibniz British Empiricism and Kant arguing that neither cognition nor language can be adequately accounted for unless the mind is given its full due This implies that a distinction must be made following Alexius Meinong but against Russell and Quine between actual and virtual reality The latter is a product of the causally active mind and a necessary ingredient for the setting up of mental models without which neither cognition nor language can function Mental models are coherent sets of propositions and can be wholly or partially true or false Positivism rules out mental models blocking any serious semantics and thereby reducing both language and cognition to caricatures of themselves Seuren presents a causal theory of meaning linking up language with cognition and solving the old question of what meaning actually amounts to Key Features Provides a fundamental reassessment of the methodology of the humanities Makes a distinctive contribution to the conceptual foundations of linguistics and philosophy of mind Explores the philosophical and historical origins of central developments in the human sciences in the past 100 years Offers a new approach to ontology and epistemology in the scientific study of the creative human mind and its products

Idealism Tyron Goldschmidt, Kenneth L. Pearce, 2017 Idealism is a family of metaphysical views each of which gives priority to the mental The best known forms of idealism in Western philosophy are Berkeleyan idealism which gives ontological priority to the mental minds and ideas over the physical bodies and Kantian idealism which gives a kind of explanatory priority to the mental the structure of the understanding over the physical the structure of the empirical world Although idealism was once a dominant view in Western philosophy it has suffered almost total neglect over the last several decades This book rectifies this situation by bringing together seventeen essays by leading philosophers on the topic of metaphysical idealism The various essays explain attack or defend a variety of idealistic theories including not only Berkeleyan and Kantian idealisms but also those developed in traditions less familiar to analytic philosophers including Buddhism and Hassidic Judaism Although a number of the articles draw on historical sources all will be of interest to philosophers working in contemporary metaphysics This volume aims to spark a revival of serious philosophical interest in

metaphysical idealism      God? Very Probably Robert H. Nelson, 2015-11-11 In recent years a number of works have appeared with important implications for the age old question of the existence of a god These writings many of which are not by theologians strengthen the rational case for the existence of a god even as this god may not be exactly the Christian God of history This book brings together for the first time such recent diverse contributions from fields such as physics the philosophy of human consciousness evolutionary biology mathematics the history of religion and theology Based on such new materials as well as older ones from the twentieth century it develops five rational arguments that point strongly to the very probable existence of a god They do not make use of the scientific method which is inapplicable to the question of a god Rather they are in an older tradition of rational argument dating back at least to the ancient Greeks For those who are already believers the book will offer additional rational reasons that may strengthen their belief Those who do not believe in the existence of a god at present will encounter new rational arguments that may cause them to reconsider their opinion

**Historical Dictionary of Wittgenstein's Philosophy** Duncan Richter, 2014-04-04 Ludwig Wittgenstein was the most influential and arguably the greatest philosopher of the 20th century This fact about his influence is not only a matter of how much he influenced people but also of how many people he influenced His early work was taken up by some of the pioneers of analytical philosophy His later work helped spawn another movement within analytic philosophy that of ordinary language philosophy sometimes called Oxford philosophy He is also considered by some to be a key postmodern thinker and an interest in his work is a distinguishing feature of many post analytical philosophers who seek to bridge the gap between analytical and so called continental philosophy This second edition of Historical Dictionary of Wittgenstein's Philosophy covers the history of this philosophy through a chronology an introductory essay and an extensive bibliography The dictionary section has over 300 cross referenced entries on every aspect of his work This book is an excellent access point for students
