*American Serengeti* Dan Flores, 2017-01-16 America's Great Plains once possessed one of the grandest wildlife spectacles of the world equaled only by such places as the Serengeti the Masai Mara or the veld of South Africa Pronghorn antelope gray wolves bison coyotes wild horses and grizzly bears less than two hundred years ago these creatures existed in such abundance that John James Audubon was moved to write it is impossible to describe or even conceive the vast multitudes of these animals In a work that is at once a lyrical evocation of that lost splendor and a detailed natural history of these charismatic species of the historic Great Plains veteran naturalist and outdoorsman Dan Flores draws a vivid portrait of each of these animals in their glory and tells the harrowing story of what happened to them at the hands of market hunters and ranchers and ultimately a federal killing program in the nineteenth and twentieth centuries The Great Plains with its wildlife intact dazzled Americans and Europeans alike prompting numerous literary tributes *American Serengeti* takes its place alongside these celebratory works showing us the grazers and predators of the plains against the vast opalescent distances the blue mountains shimmering on the horizon the great rippling tracts of yellowed grasslands Far from the empty flyover country of recent times this landscape is alive with a complex ecology at least 20 000 years old a continental patrimony whose wonders may not be entirely lost as recent efforts hold out hope of partial restoration of these historic species Written by an author who has done breakthrough work on the histories of several of these animals including bison wild horses and coyotes *American Serengeti* is as rigorous in its research as it is intimate in its sense of wonder the most deeply informed closely observed view we have of the Great

Isenberg, 2000 This study first published in 2000 examines the cultural and ecological causes of the near extinction of the bison      *The Last Stand of the Pack* Arthur Carhart, 2017-12-01 This critical edition explores the past and future of wolves in Colorado Originally published in 1929 *The Last Stand of the Pack* is a historical account of the extermination of what were then believed to be the last wolves in Colorado Arthur H. Carhart and Stanley P. Young describe the wolves' extermination and extoll the bravery of the federal trappers hunting them down while simultaneously characterizing the wolves as cunning individuals and noble adversaries to the growth of the livestock industry and the settlement of the West This is nature writing at its best even if the worldview expressed is at times jarring to the twenty first century reader Now almost 100 years later much has been learned about ecology and the role of top tier predators within ecosystems In this new edition Carhart and Young's original text is accompanied by an extensive introduction with biographical details on Arthur Carhart and an overview of the history of wolf eradication in the west chapters by prominent wildlife biologists environmentalists wolf reintroduction activists and ranchers Tom Compton Bonnie Brown Mike Phillips Norman A. Bishop and Cheney Gardner and an epilogue considering current issues surrounding the reintroduction of wolves in Colorado Presenting a balanced perspective these additional chapters address views both in support of and opposed to wolf reintroduction Coloradans are deeply interested in wilderness and the debate surrounding wolf reintroduction but for wolves to have a future in Colorado we must first understand the past *The Last Stand*

of the Pack Critical Edition presents both important historical scholarship and contemporary ecological ideas offering a complete picture of the impact of wolves in Colorado *Shifting Ground* Bonnie. COSTELLO, Bonnie Costello, 2009-06-30 Just as the look of the American landscape has changed since the nineteenth century so has our idea of landscape Here Bonnie Costello reads six twentieth century American poets who have reflected and shaped this transformation and in the process renovated landscape by drawing new images from the natural world and creating new forms for imagining the earth and our relation to it *Land in the American West* William G. Robbins, James C. Foster, 2011-12-01 Throughout the history of the United States the concepts of land and the West have fired the American imagination and fueled controversy The essays in *Land in the American West* deal with complex troublesome and interrelated questions regarding land Who owns it Who has access to it What happens when private rights infringe upon the public good or when one ethnic group is pitted against another or when there is a conflict between economic and environmental values Many of these questions have deep historical roots They all have special significance in the modern American West where natural resources are still abundant and large areas of land are federally owned *The Better to Eat You With* Joel Berger, 2009-11-15 At dawn on a brutally cold January morning Joel Berger crouched in the icy grandeur of the Teton Range It had been three years since wolves were reintroduced to Yellowstone after a sixty year absence and members of a wolf pack were approaching a herd of elk To Berger's utter shock the elk ignored the wolves as they went in for the kill The brutal attack that followed swift and bloody led Berger to hypothesize that after only six decades the elk had forgotten to fear a species that had survived by eating them for hundreds of millennia Berger's fieldwork that frigid day raised important questions that would require years of travel and research to answer Can naive animals avoid extinction when they encounter reintroduced carnivores To what extent is fear culturally transmitted And how can a better understanding of current predator prey behavior help demystify past extinctions and inform future conservation *The Better to Eat You With* is the chronicle of Berger's search for answers From Yellowstone's elk and wolves to rhinos living with African lions and moose coexisting with tigers and bears in Asia Berger tracks cultures of fear in animals across continents and climates engaging readers with a stimulating combination of natural history personal experience and conservation Whether battling bureaucracy in the statehouse or fighting subzero wind chills in the field Berger puts himself in the middle of the action *The Better to Eat You With* invites readers to join him there The thrilling tales he tells reveal a great deal not only about survival in the animal kingdom but also the process of doing science in foreboding conditions and hostile environments *Creating a Modern Countryside* James Murton, 2011-11-01 In the early 1900s British Columbia embarked on a brief but intense effort to manufacture a modern countryside The government wished to reward veterans of the Great War with new lives soliders and other settlers would benefit from living in a rural community considered a more healthy and moral alternative to urban life But the fundamental reason for the land resettlement project was the rise of progressive or new liberal thinking as reformers advocated an expanded role for the state in guaranteeing the

prosperity and economic security of its citizens This ideological shift pushed the government to intervene directly in the management of not only society but also the natural environment As most arable accessible land in British Columbia was already being farmed by 1919 the state had to undertake environmental engineering projects on a scale not yet attempted in the province Creating a Modern Countryside examines how this process unfolded identifies its successes and failures and demonstrates how the human environment relationship of the early twentieth century shaped the province as it is today

**Adventuring with Boldness** Bruce C. Paton, 2006 This book is split into two sections the first telling the stories of the expeditions of Alexander Mackenzie Zebulon Pike Lewis and Clark John Wesley Powell and more The second part tells how they dealt with travel issues      The Maya Tropical Forest James D. Nations, 2010-01-01 The Maya Tropical Forest which occupies the lowlands of southern Mexico Guatemala and Belize is the closest rainforest to the United States and one of the most popular tourist destinations in the Western Hemisphere It has been home to the Maya peoples for nearly four millennia starting around 1800 BC Ancient cities in the rainforest such as Palenque Yaxchilan Tikal and Caracol draw thousands of tourists and scholars seeking to learn more about the prehistoric Maya Their contemporary descendants the modern Maya utilize the forest s natural resources in village life and international trade while striving to protect their homeland from deforestation and environmental degradation Writing for both visitors and conservationists James Nations tells the fascinating story of how ancient and modern Maya peoples have used and guarded the rich natural resources of the Maya Tropical Forest He opens with a natural history that profiles the forest s significant animals and plants Nations then describes the Maya peoples biological preserves and major archaeological sites in Mexico Guatemala and Belize Drawing on more than twenty five years of conservation work in the Maya Tropical Forest Nations tells first hand stories of the creation of national parks and other protected areas to safeguard the region s natural resources and archaeological heritage He concludes with an expert assessment of the forest s future in which he calls for expanded archaeological tourism to create an ecologically sustainable economic base for the region      *Dam Politics* William Robert Lowry, 2003 The politics of building dams and levees and other structures are just part of the policies determining how American rivers are managed or mismanaged America s well being depends upon the health of those rivers and important decisions go beyond just dam building or dam removal American rivers are suffering from poor water quality altered flows and diminished natural habitat Current efforts by policymakers to change the ways American rivers are managed range from the removal of dams to the simulation of seasonal flows to the restoration of habitat all with varying degrees of success Efforts to restore American rivers are clearly delineated by William Lowry in *Dam Politics* as he looks at how public policy and rivers interact examines the physical differences in rivers that affect policies and analyzes the political differences among the groups that use them He argues that we are indeed moving into an era of restoration defined in part as removing dams but also as restoring the water quality seasonal flows and natural habitat that existed before structural changes to the rivers and seeks to understand

the political circumstances that affect the degree of restoration Lowry presents case studies of eight river restoration efforts including dam removals on the Neuse and Kennebec rivers simulation of seasonal flows on the Colorado river and the failed attempt to restore salmon runs on the Snake river He develops a typology of four different kinds of possible change dependent on the parties involved and the physical complexity of the river and then examines the cases using natural historical material along with dozens of interviews with key policymakers Policy approaches such as conjunctive water management adaptive management alternative licensing processes and water marketing are presented as possible ways of using our rivers more wisely Dam Politics provides a useful and systematic account of how American waterways are managed and how current policies are changing American rivers are literally the lifeblood of our nation Lowry has written a lively and accessible book that makes it clear as a mountain stream that it matters deeply how those rivers are managed

Coleman, 2014-05-01 The guiding theme of these essays by aesthetician musician and Santayana scholar Morris Grossman is the importance of preserving the tension between what can be unified and what is disorganized random and miscellaneous Grossman described this as the tension between art and morality Art arrests a sense of change and yields moments of unguarded enjoyment and peace but soon shifting circumstances compel evaluation decision and action According to Grossman the best art preserves the tension between the aesthetic consummation of experience and the press of morality understood as the business of navigating conflicts making choices and meeting needs This concern was intimately related to his reading of George Santayana The best philosophy like the best art preserves the tension between what can be ordered and what resists assimilation and Grossman read Santayana as exemplifying this virtue

in his embrace of multiple perspectives Other scholars have noted the multiplicity or irony in Santayana s work but Grossman was unique in taking such a style to be a substantive part of Santayana s philosophizing
