Public Works Manual, 1995

New Perspectives on the Biology of Nectaries and Nectars Clay Carter, Robert W. Thornburg, Massimo Nepi, 2019-08-27 The number of currently known described and accepted plant species is ca 374 000 of which approximately 295 00 79% are angiosperms Almost 90% of this huge number of flowering plants is pollinated by animals mostly insects via nectar mediated interactions Notably three fourths of the leading global crop plants produce nectar and are animal pollinated which is estimated to account for one third of human food resources Nectar can also be produced on tissues outside of flowers by so called extrafloral nectaries and commonly mediate interactions with body guard ants and other pugnacious insects that defend the plant from herbivores

Extrafloral nectar is present in almost 4 000 plant species a majority of them in the angiosperms This brief summary on the occurrence of nectar in the plant kingdom is just to highlight that nectar has a fundamental role in two basal functions that allow the maintenance of our ecosystems sexual plant reproduction and protection of plants from herbivory Despite playing essential ecological and evolutionary functions our current knowledge about nectar is largely incomplete however new research directions and perspectives on nectaries and nectars have arisen in recent years In the last two decades there were only a few moments in which nectar was the main character in international meetings or in published books In 2002 the first and only international meeting Nectar and nectary from biology to biotechnology dedicated exclusively to nectar and nectaries was held in Italy Montalcino Siena and in 2003 the proceedings were published in a special volume of Plant Systematics and Evolution 238 issue 1 4 In 2007 the book Nectar and Nectaries was published Springer with most of the contributions provided by authors that attended the meeting in Italy Another book dedicated to nectar was published in 2015 Nectar Production Chemical Composition and Benefits to Animals and Plants Nova Science Publishers covering aspects mainly related to nectar chemical composition and plant pollinator interactions Similarly symposia focused on nectar have been organized within the International Botanical Congress in 2011 and 2017 Considering that the last few years has yielded essential developments in the understanding of nectar biology we thought now is the moment to further stimulate research on this important topic This aim has been met through 18 papers published in our Research Topic New Perspectives on the Biology of Nectaries and Nectars with subjects spanning evolution and ecology to nectar chemistry and nectary structure

Metabolic Interactions Between Bacteria and Phytoplankton Xavier Mayali, Sonya Dyhrman, Chris Francis, 2018-06-06 The cycling of energy and elements in aquatic environments is controlled by the interaction of autotrophic and heterotrophic processes In surface waters of lakes rivers and oceans photosynthetic microalgae and cyanobacteria fix carbon dioxide into organic matter that is then metabolized by heterotrophic bacteria and perhaps archaea Nutrients are remineralized by heterotrophic processes and subsequently enable phototrophs to grow The organisms that comprise these two major ecological guilds are numerous in both numbers and in their genetic diversity leading to a vast

array of physiological and chemical responses to their environment and to each other Interactions between bacteria and phytoplankton range from obligate to facultative as well as from mutualistic to parasitic and can be mediated by cell to cell attachment or through the release of chemicals The contributions to this Research Topic investigate direct or indirect interactions between bacteria and phytoplankton using chemical physiological and or genetic approaches Topics include nutrient and vitamin acquisition algal pathogenesis microbial community structure during algal blooms or in algal aquaculture ponds cell cell interactions chemical exudation signaling molecules and nitrogen exchange These studies span true symbiosis where the interaction is evolutionarily derived as well as those of indirect interactions such as bacterial incorporation of phytoplankton produced organic matter and man made synthetic symbiosis synthetic mutualism

Commerce Business Daily, 1998-07 *The Potential Role of Gut Microbiome in Animal Gut-Linked Diseases* Tang Zhaoxin, Yung-Fu Chang, Mujeeb Ur Rehman, Hui Zhang, 2023-04-26 *Biodegradable Polymers for Biomedical Applications*, volume III Liqun Yang, Jianshe Hu, Shuai Jiang, Yeh-Hsing Lao, Yang Yao, 2025-02-03 Biodegradable polymers are an important class of polymers due to their good biodegradability and biocompatibility The research and application of biodegradable polymers in biomedical fields have attracted extensive attention especially in that of drug delivery tissue engineering and regenerative medicine Biodegradable polymers can be broken down in vivo through enzymatic and non enzymatic degradation For biomedical applications the chemical and mechanical properties degradation mechanism and products and other factors of the polymers play a critical role in their degradation behaviors and application Thus many essential issues must be considered in the design of biodegradable polymers for biomedical application For instance sufficient mechanical strength is important for scaffold materials to provide three dimensional space for cells and its degradation rate must be compatible with tissue regeneration When used as the drug carriers for some implants controllable degradation rate is also required for the biodegradable polymers to avoid explosive release besides good permeability More importantly the biodegradable polymers must have good biocompatibility to avoid adverse reactions such as inflammation in the body and the degradation products must be non toxic and should not be accumulated in the body To meet such requirements the chemical and physical as well as the degradation properties of polymers must be properly tailored *Genetic Dissection of Important Traits in Aquaculture: Genome-scale Tools Development, Trait Localization and Regulatory Mechanism Exploration* Peng Xu, Lior David, Paulino Martinez, Gen Hua Yue, 2020-07-31 Wound Repair and Regeneration Allison Cowin, 2018-03-15 This book is a printed edition of the Special Issue New Innovations in Wound Healing and Repair that was published in IJMS

PLGA Based Drug Carrier and Pharmaceutical Applications Maria Carmo Pereira, Joana A. Loureiro, 2021-03-01 Poly lactic co glycolic acid PLGA is one of the most successful polymers used for producing therapeutic devices such as drug carriers DC PLGA is one of the few polymers that the Food and Drug Administration FDA has approved for human administration due to its biocompatibility and biodegradability In recent years DC produced with PLGA has gained enormous

attention for its versatility in transporting different type of drugs e g hydrophilic or hydrophobic small molecules or macromolecules with a controlled drug release without modifying the physiochemical properties of the drugs These drug delivery systems have the possibility potential to modify their surface properties with functional groups peptides or other coatings to improve the interactions with biological materials Furthermore they present the possibility to be conjugated with specific target molecules to reach specific tissues or cells They are also used for different therapeutic applications such as in vaccinations cancer treatment neurological disorder treatment and as anti inflammatory agents This book aims to focus on the recent progress of PLGA as a drug carrier and their new pharmaceutical applications
