Zeglis,2019-04-02 This book is a comprehensive guide to radiopharmaceutical chemistry The stunning clinical successes of  
nuclear imaging and targeted radiotherapy have resulted in rapid growth in the field of radiopharmaceutical chemistry an  
essential component of nuclear medicine and radiology However at this point interest in the field outpaces the academic and  
educational infrastructure needed to train radiopharmaceutical chemists For example the vast majority of texts that address  
radiopharmaceutical chemistry do so only peripherally focusing instead on nuclear chemistry i e nuclear reactions in reactors  
heavy element radiochemistry i e the decomposition of radioactive waste or solely on the clinical applications of  
radiopharmaceuticals e g the use of PET tracers in oncology This text fills that gap by focusing on the chemistry of  
radiopharmaceuticals with key coverage of how that knowledge translates to the development of diagnostic and therapeutic  
radiopharmaceuticals for the clinic The text is divided into three overarching sections First Principles Radiochemistry and  
Special Topics The first is a general overview covering fundamental and broad issues like The Production of Radionuclides  
and Basics of Radiochemistry The second section is the main focus of the book In this section each chapter s author will delve  
much deeper into the subject matter covering both well established and state of the art techniques in radiopharmaceutical  
chemistry This section will be divided according to radionuclide and will include chapters on radiolabeling methods using all  
of the common nuclides employed in radiopharmaceuticals including four chapters on the ubiquitously used fluorine 18 and a  
Best of the Rest chapter to cover emerging radionuclides Finally the third section of the book is dedicated to special topics  
with important information for radiochemists including Bioconjugation Methods Click Chemistry in Radiochemistry and  
Radiochemical Instrumentation This is an ideal educational guide for nuclear medicine physicians radiologists and  
radiopharmaceutical chemists as well as residents and trainees in all of these areas     **Government Reports Annual**
