## Microplate Scintillation and Luminescence Counter

### DESCRIPTION

MicroBeta® JET is a multi-detector instrument designed for liquid scintillation or luminescence detection of samples in microplates, tubes or on filters.

Three different MicroBeta models are available. Two manually loaded models have sample capacities of up to 16 or 32 plates. The third model is fitted with an external loading platform for fully automatic loading by robot systems.

MicroBeta JET also includes one or more reagent injectors for measuring prompt (or 'flash') reactions. Multi-detector versions of the instrument can have one or two Injector Modules installed to measure one or two injection and counting sequences. The single detector MicroBeta JET can have up to four Injector Modules.

### STANDARD FEATURES

- **Choice of 1, 2, 3 or 6 detectors**, which can count in 96- and 24-well formats. Software features include the facility to count non-standard 4 x 6 formats.
- **Unique detector design** consists of two photomultiplier tubes (PMT), one positioned above the sample and one below. These count the sample from the top and bottom at the same time (coincidence counting), providing the best possible counting geometry and excellent counting efficiency for every assay type. MicroBeta is suitable for counting scintillation proximity assays with FlashBlue™ or SPA; filtration assays (e.g., with Millipore MultiScreen™); tissue culture plates; all solid (or dry) scintillators such as MeltiLex®; yttrium silicate; FlashPlate® microplates; and liquid scintillation counting are all ideal for use with the MicroBeta.

MicroBeta® JET

- **Automatic optimized photo-multiplier movement** gives the correct geometry for microplates, filtermats or tubes up to a maximum sample height of 45 mm. The maximum sample height in robot loading a MicroBeta is 20 mm.
- **Unique cassette-based sample changing mechanism** provides a versatile sample support system for all kinds of sample types, from microplates to microcentrifuge tubes to 4 mL LSC vials.
- **Cassette support for all sample types** provides the only practical way to count flexible microplates, complete filtermats or tubes.
- **Bar code reader** that focuses on a reusable barcode on the cassette provides identification of up to 100 counting protocols and other counting commands.
- **Multiple reagent dispensing** in multi-detector instruments enables delivery of different reagents to the reading position of each detector and therefore specific wells in each plate. For example,
