*Turbulence and Coherent Structures* O. Métais, Marcel Lesieur, 2013-03-09 In the last 25 years one of the most striking advances in Fluid Mechanics was certainly the discovery of coherent structures in turbulence laboratory experiments and numerical simulations have shown that most turbulent flows exhibit both spatially organized large scale structures and disorganized motions generally at smaller scales The development of new measurement and visualization techniques have allowed a more precise characterization and investigation of these structures in the laboratory Thanks to the unprecedented increase of computer power and to the development of efficient interactive three dimensional colour graphics computational fluid dynamicists can explore the still mysterious world of turbulence However many problems remain unsolved concerning the origin of these structures their dynamics and their interaction with the disorganized motions In this book will be found the latest results of experimentalists theoreticians and numerical modellers interested in these topics These coherent structures may appear on airplane wings or slender bodies mixing layers jets wakes or boundary layers In free shear flows and in boundary layers the results presented here highlight the intense three dimensional character of the vortices The two dimensional large scale eddies are very sensitive to three dimensional perturbations whose amplification leads to the formation of three dimensional coherent vortical structures such as streamwise hairpin or horseshoe vortex filaments This book focuses on modern aspects of turbulence study Relations between turbulence theory and optimal control theory in mathematics are discussed This may have important applications with regard to e.g numerical weather forecasting

Transport and Coherent Structures in Wall Turbulence Sedat Tardu, 2014-10-06 Wall bounded turbulent flows are of major importance in industrial and environmental fluid mechanics The structure of the wall turbulence is intrinsically related to the coherent structures that play a fundamental role in the transport process The comprehension of their regeneration mechanism is indispensable for the development of efficient strategies in terms of drag control and near wall turbulence management This book provides an up to date overview on the progress made in this specific area in recent years

*Coherent Structures in Parietal Turbulent Flows* Tardu Sedat, 2015-11-09 The wall is a source of many complexities including turbulence modeling and thus requires a thorough understanding of all the physics involved *Coherent Structures in Parietal Turbulent Flows* provides scientists researchers and engineers with all the necessary information on the physical analysis measurement and calculation of these flows Taking into account the latest developments in the field the author discusses the fundamentals of turbulence phenomenology and closures of spectral behavior the effect of the Reynolds number on parietal turbulence characteristics and transport of vorticity

**Wall Turbulence Control** Sedat Tardu, 2017-02-07 Wall turbulence control is a major subject the investigation of which involves

significant industrial environmental and fundamental consequences Wall Turbulence Control addresses recent advances achieved in active and passive wall turbulence control over the past two decades This valuable reference for scientists researchers and engineers provides an updated view of the research into this topic including passive control optimal and suboptimal control methodology linear control and control using adaptive methods neural networks polymer and bubble injection electromagnetic control and recent advances in control by plasma     *Aeronautical Engineering: A Cumulative Index to a Continuing Bibliography (supplement 300)* ,1994     *International Aerospace Abstracts* ,1998     **Agard Index of Publications, 1992-1994** ,1995     *NASA SP.* ,1993     *Aeronautical Engineering* ,1993 A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports STAR and International aerospace abstracts IAA     **Conference Papers Index** ,1986 Monthly Papers presented at recent meeting held all over the world by scientific technical engineering and medical groups Sources are meeting programs and abstract publications as well as questionnaires Arranged under 17 subject sections 7 of direct interest to the life scientist Full programs of meetings listed under sections Entry gives citation number paper title name mailing address and any ordering number assigned Quarterly and annual indexes to subjects authors and programs not available in monthly issues     **The Global Geometry of Turbulence** Javier Jiménez,2012-12-06 The aim of this Advanced Research Workshop was to bring together Physicists Applied Mathematicians and Fluid Dynamicists including very specially experimentalists to review the available knowledge on the global structural aspects of turbulent flows with an especial emphasis on open systems and to try to reach a consensus on their possible relationship to recent advances in the understanding of the behaviour of low dimensional dynamical systems and amplitude equations A lot has been learned during recent years on the non equilibrium behaviour of low dimensional dynamical systems including some fluid flows Rayleigh Benard Taylor Couette etc These are mostly closed flows and many of the global structural features of the low dimensional systems have been observed in them including chaotic behaviour period doubling intermit tency etc It has also been shown that some of these flows are intrinsically low dimensional which accounts for much of the observed similarities Open flows seem to be different and experimental observations point to an intrinsic high dimensionality However some of the tran sitional features of the low dimensional systems have been observed in them specially in the intermittent behaviour of subcritical flows pipes channels boundary layers with suction etc and in the large scale geometry of coherent structures of free shear flows mixing layers jets and wakes     *Dissertation Abstracts International* ,1998     **Government Reports Annual Index** ,1991     **Applied Mechanics Reviews** ,1992     **34th Aerospace Sciences Meeting & Exhibit** ,1996     *Referativnyi zhurnal* ,1976     *Government Reports Announcements & Index* ,1990-12     **Aeronautical Engineering: A Continuing Bibliography, 1982 Cumulative Index** ,1983     **IBZ** ,1985
