increasing population We are now in a position through methods including life cycle assessment LCA carbon footprinting and other tools to accurately measure and assess our use or misuse of natural resources including food The impact of new technologies and management systems can therefore improve efficiencies and find new ways to reduce waste Global Food Security and Supply provides robust succinct information for people who want to understand how the global food system works The book demonstrates the specific tools available for understanding how food supply works addresses the challenges facing a secure and safe global food supply and helps readers to appreciate how these challenges might be overcome This book is a concise and accessible text that focuses on recent data and findings from a range of international collaborations and studies The author provides both a snapshot of global food supply and security today and a projection of where these issues may lead us in the future This book will therefore be of particular interest to food policy leaders commercial managers in the food industry and researchers and students seeking a better understanding of a rapidly evolving topic

*Nutritionism* Gyorgy Scrinis, 2013-06-18 Popularized by Michael Pollan in his best selling *In Defense of Food* Gyorgy Scrinis's concept of nutritionism refers to the reductive understanding of nutrients as the key indicators of healthy food an approach that has dominated nutrition science dietary advice and food marketing Scrinis argues this ideology has narrowed and in some cases distorted our appreciation of food quality such that even highly processed foods may be perceived as healthful depending on their content of good or bad nutrients Investigating the butter versus margarine debate the battle between low fat low carb and other weight loss diets and the food industry's strategic promotion of nutritionally enhanced foods Scrinis reveals the scientific social and economic factors driving our modern fascination with nutrition Scrinis develops an original framework and terminology for analyzing the characteristics and consequences of nutritionism since the late nineteenth century He begins with the era of quantification in which the idea of protective nutrients caloric reductionism and vitamins curative effects took shape He follows with the era of good and bad nutritionism which set nutricentric dietary guidelines and defined the parameters of unhealthy nutrients and concludes with our current era of functional nutritionism in which the focus has shifted to targeted nutrients superfoods and optimal diets Scrinis's research underscores the critical role of nutrition science and dietary advice in shaping our relationship to food and our bodies and in heightening our nutritional anxieties He ultimately shows how nutritionism has aligned the demands and perceived needs of consumers with the commercial interests of food manufacturers and corporations Scrinis also offers an alternative paradigm for assessing the healthfulness of foods the food quality paradigm that privileges food production and processing quality cultural traditional knowledge and sensual practical experience and promotes less reductive forms of nutrition research and dietary advice

*The Meat Crisis* John Webster, Joyce D'Silva, 2013-10-18 Meat and dairy production and consumption are in crisis Globally 60 billion farm animals are used for food production every year It is well accepted that methane emissions from cattle and other livestock are major contributors to greenhouse gas levels and to climate change The Food and

Agriculture Organization of the United Nations FAO predicts a rough doubling of meat and milk consumption by 2050 with particularly rapid growth occurring in the developing economies of Asia This could raise the number of farm animals used annually to nearer 120 billion What will this mean for the health and wellbeing of those animals of the people who consume ever larger quantities of animal products and for the health of the planet itself This powerful and challenging book explores these issues surrounding the global growth in the production and consumption of meat and dairy animals and products including cultural and health factors and the implications of the likely intensification of farming for both small scale producers and for the animals Several chapters explore the related environmental issues from resource use of water cereals and soya to the impact of livestock production on global warming and issues concerning biodiversity land use and the impacts of different farming systems on the environment A final group of chapters addresses ethical and policy implications for the future of food and livestock production and consumption The overall message is clearly that we must eat less meat to help secure a more sustainable and equitable world      *Why Am I So Tired?
