The Complete Fairy Tales George MacDonald, U. C. Knoepfelmacher, 1999-09-01 George MacDonald occupied a major position in the intellectual life of his Victorian contemporaries This volume brings together all eleven of his shorter fairy stories as well as his essay The Fantastic Imagination The subjects are those of traditional fantasy good and wicked fairies children embarking on elaborate quests and journeys into unsettling dreamworlds Within this familiar imaginative landscape his children s stories were profoundly experimental questioning the association of childhood with purity and innocence and the need to separate fairy tale wonder from adult scepticism and disbelief

The Ekistics of Animal and Human Conflict Rishi Dev, 2016-09-01 Urban wildlife management is a town planning subject It is logical and important to relate the animal and human conflict seen all over the world as a phenomenon which is applicable to all types of human settlements despite the diversities and complexities of cultures societal structures laws value systems religions and so on A universal principle or theory governs and applies to all cities which define these conditions and phenomena creating the conflict or coexistence This book investigates the niches of one of the key urban animals from a syntactic semantic and pragmatic perspective and explores how these niches are naturally synonymous to similar patterns structures and compositions within human settlements It explores and defines the demographic patterns thresholds and phenomenon which leads to formation of the different levels and extremes of

interaction between the species This forms a paradigm which classifies this conflict within the various disciplines and frameworks of urban ecology The focus is primarily on urban dogs it being a keystone species but is later related with other urban animals as well The premise for this approach is that history has shown how certain species have persuasively coexisted with humans for so many millennia yet a conflict happens between animals and humans and within humans over animals It is thus logical to believe that the forces which create this conflict cannot solely be natural to the species in question and have to come from outside from the settlement patterns of both species and the net resultant force and dynamics The book looks at these dichotomies in four distinct but interrelated ways It delves deep inside four niches which form the dynamics of any settlement spatial cultural ecological and economic and explores all scales at which the succession and evolution of animals take place in highly urbanized settlements
