

WEIGHTING AND COUNTERWEIGHTING

During normal digging conditions, as the bucket is filled, there is a tendency for the rear of the tractor to raise off of the ground and move toward the bucket. The stabilizer pad spades prevent the tractor from rolling rearward. Therefore, the ability of the stabilizers to anchor the tractor depends on the amount of counterweight.

Counterweighting is particularly critical when operating the backhoe in the extreme swing positions, because the tendency is to lift one stabilizer and transfer the total weight of the unit to the other stabilizer.
