*Empiricisms* Barry Allen, 2021 *Empiricisms* is about the value of experience and experiments Why do we esteem them and what is their contribution to knowledge The work is unique in the detail with which it explains empiricism from its beginning in ancient medicine to its emergence as a philosophy of modern science It elucidates the ideas of the so called radical empiricists clarifying their relation to historical empiricism and explaining what is radical about them and develops a comparison between European empiricism and ideas and practice in traditional China Bringing China into the argument is an unexpected innovation and makes the work a model for comparative philosophy [As You Law It - Negotiating Shakespeare](#)

Daniela Carpi, François Ost, 2018-10-22 Shakespeare was fascinated by law which permeated Elizabethan everyday life The general impression one derives from the analysis of many plays by Shakespeare is that of a legal situation in transformation and of a dynamically changing relation between law and society law and the jurisdiction of Renaissance times Shakespeare provides the kind of literary supplement that can better illustrate the legal texts of the sixteenth and early seventeenth centuries There was a strong popular participation in the system of justice and late sixteenth century playwrights often made use of forensic models of narrative Uncertainty about legal issues represented a rich potential for causing strong reactions in the public especially feelings concerning the resistance to tyranny The volume aims at highlighting some of the many legal perspectives and debates emplotted in Shakespearean plays also taking into consideration the many texts that have been produced during the latest years on law and literature in the Renaissance [Liberia and the Dialectic of Law](#) Shane Chalmers, 2018-05-16 It is the condition of modernity that an institution cannot depend on a god tradition or any other transcendental source to secure its foundations which thereby come to rest upon or rather in and through its subjects Never wholly separated from its subjects and yet never identical with them this contradictory condition provides a way of seeing how modern law gives form to life and how law takes form enlivened by its subjects By driving Theodor Adorno s dialectical philosophy into the concept of law the book shows how this contradictory condition enables law to become instituted in ways that are hostile to its subjects but also how law remains open to its subjects and thus disposed towards transformation To flesh out an understanding of this contradiction the book examines the making and remaking of Liberia from its conception as an idea of liberty at the beginning of the nineteenth century to its reconstruction at the beginning of the twenty first with the assistance of an international intervention to establish a state based on the rule of law In so doing the book shows how law is at the epicentre of a colonising power in Liberia that renders subjects as mere objects but at the same time the book exposes the instability of this power by showing how law is also enlivened by its subjects as it takes form in and through their lives and interactions It is this fundamentally contradictory condition of law that ultimately denies power any absolute hold leaving law open to the self expression of its subjects [From Madman to Crime Fighter](#) Roslynn D. Haynes, 2017-08-31 A study of the scientist in Western culture from medieval images of alchemists to present day depictions of cyberpunks and

genetic engineers They were mad of course Or evil Or godless amoral arrogant impersonal and inhuman At best they were well intentioned but blind to the dangers of forces they barely controlled They were Faust Frankenstein Jekyll Moreau Caligari Strangelove the scientists of film and fiction cultural archetypes that reflected ancient fears of tampering with the unknown or unleashing the little understood powers of nature In *From Madman to Crime Fighter* Roslynn D Haynes analyzes stereotypical characters including the mad scientist the cold blooded pursuer of knowledge the intrepid pathbreaker and the bumbling fool that from medieval times to the present day have been used to depict the scientist in Western literature and film She also describes more realistically drawn scientists characters who are conscious of their public responsibility to expose dangers from pollution and climate change yet fearful of being accused of lacking evidence Drawing on examples from Britain America Germany France Russia and elsewhere Haynes explores the persistent folklore of mad doctors of science and its relation to popular fears of a depersonalized male dominated and socially irresponsible pursuit of knowledge for its own sake She concludes that today s public response to science and scientists much of it negative is best understood by recognizing the importance of such cultural archetypes and their significance as myth *From Madman to Crime Fighter* is the most comprehensive study of the image of the scientist in Western literature and film

**Cultural Science** John Hartley, Jason Potts, 2014-09-25 *Cultural Science* introduces a new way of thinking about culture Adopting an evolutionary and systems approach the authors argue that culture is the population wide source of newness and innovation it faces the future not the past Its chief characteristic is the formation of groups or demes organised and productive subpopulation demes Demes are the means for creating distributing and growing knowledge However such groups are competitive and knowledge systems are adversarial Starting from a rereading of Darwinian evolutionary theory the book utilises multidisciplinary resources Raymond Williams s culture is ordinary approach evolutionary science e.g Mark Pagel and Herbert Gintis semiotics Yuri Lotman and economic theory from Schumpeter to McCloskey Successive chapters argue that Culture and knowledge need to be understood from an externalist linked brains perspective rather than through the lens of individual behaviour Demes are created by culture especially storytelling which in turn constitutes both politics and economics The clash of systems including demes is productive of newness meaningfulness and successful reproduction of culture Contemporary urban culture and citizenship can best be explained by investigating how culture is used and how newness and innovation emerge from unstable and contested boundaries between different meaning systems The evolution of culture is a process of technologically enabled demic concentration of knowledge across overlapping meaning systems or semiospheres a process where the number of demes accessible to any individual has increased at an accelerating rate resulting in new problems of scale and coordination for cultural science to address The book argues for interdisciplinary consilience linking evolutionary and complexity theory in the natural sciences economics and anthropology in the social sciences and cultural communication and media studies in the humanities and creative arts It describes what is needed for a

new modern synthesis for the cultural sciences It combines analytical and historical methods to provide a framework for a general reconceptualisation of the theory of culture one that is focused not on its political or customary aspects but rather its evolutionary significance as a generator of newness and innovation

**The Divine Daughter** Andrew Gilchrist,2019-04-17  
Ever feel swept up in a sea of novelty When did the new become more important than the true Andrew Gilchrist found a remedy to today s nausea of novelty in the most familiar elements of narrative and music He has composed a new arrangement from the ideas of Marshall McLuhan Northrop Frye Bernard Lonergan and Jordan Peterson weaving together a promising relationship between what we believe and how we live This book starts a conversation at the crossroads of art literature religion and psychology And it begins with the oldest of stories A boy fell in love with a girl and sung her a song Each chapter in this book charts a series of helpful symbols and sounds drawing attention to the melodies rhythms and tempos that make up our most common experiences The scientific revolution gave birth to a new understanding of the relationship between observer and observed lover and beloved That birth has changed the song However we have not welcomed this new daughter into the family with a proper name or fully recognized her part in our spiritual development With her wisdom we too might find hope and delight in the back and forth journey between tradition and innovation Could her compelling voice and playful character help us prepare for the greatest roles of our lives

*Knowledge and the Economy* Peter Meusbürger,Johannes Glückler,Martina Meskioui,2013-05-23  
The broad spectrum of topics surrounding what is termed the knowledge economy has attracted increasing attention from the scientific community in recent years The nature of knowledge intensive industries the spatiality of knowledge the role of proximity and distance in generating functional knowledge the transfer of knowledge via networks and the complex interplay between knowledge location and economic development are all live academic issues This book the fifth volume in Springer s Knowledge and Space series focuses on the last of these the multiple relationships between knowledge the economy and space It reflects the conceptual and methodological multidisciplinary emerging from this scholarship yet where there has up to now been a notable lack of communication between some of the contributing disciplines resulting in lexical and other confusions this volume brings concord and to foster interdisciplinarity These complications have been especially evident in our understanding of the spatiality of knowledge the part that spatial contexts play in knowledge creation and diffusion and the relevance of face to face contacts all of which are addressed in these pages The material here is grouped into four sections knowledge creation and economy knowledge and economic development

**Technology in Science Fiction for Young People** Noga Applebaum,2009-09-10 In this new book Noga Applebaum surveys science fiction novels published for children and young adults from 1980 to the present exposing the anti technological bias existing within a genre often associated with the celebration of technology Applebaum argues that perceptions of technology as a corrupting force particularly in relation to its use by young people are a manifestation of the enduring allure of the myth of childhood innocence and result in young adult fiction that endorses a technophobic agenda This agenda is a form of resistance to the changing face of childhood and technology s contribution to this change Further Applebaum contends that technophobic literature disempowers its young readers by implying that the technologies of the future are inherently dangerous while it neglects to acknowledge children s complex yet pleasurable interactions with technology today The study looks at works by well known authors including M T Anderson Monica Hughes Lois Lowry Garth Nix and Philip Reeve and explores topics such as ecology cloning the impact of technology on narrative structure and the adult child hierarchy While focusing on the popular genre of science fiction as a useful case study Applebaum demonstrates that negative attitudes toward technology exist within children s literature in general making the book of considerable interest to scholars of both science fiction and children s literature
