

Figure 3-14: One of two glued-up rings (one straight, one curved) for the table top

Then glue the sets of four into sets of eight, but *not* differentials for every set of eight, but just a set of four

Figure 3-15: Half ring made to be curved and glued the rings of 16

Glue the sets of eight to the sets of four to make half rings of 12 segments each. Use an edge sander or file sander to sand the ends into the same plane, and let glue the two half rings of 12 into a full ring of 24.

Figure 3-16: Running a plane through the thickness of a ring

Once the ring is glued together, you will notice that it will not be smooth enough to be used as a glue surface. To solve this problem, run each ring through a drum thickness sander to smooth out the surfaces. You must use a "push stick" to keep the ring moving smoothly through the thickness sander because the ring is so small or distorted it will not span the distance between the infeed and outfeed rollers of the sander.

Figure 3-17: Apply drum sander to the ends of the rings. Use the hand sander as a backup plan.

No thickness sander? No problem! There is an easy solution to smooth out having a thickness sander. First, cut a plywood disc (about 1/2" in diameter and using hot glue, glue the disc to the plywood. Try to glue the ring as close to "on center" as possible.

Figure 3-18: Ring mounted to the disc and run through a thickness sander

Using green, attach a panel sander to the plywood waste block and mount the whole thing on your table.

Figure 3-19: Flattening the disc with a panel sander

Using a belt sander, face off the ring to a flat surface. An added benefit is that you can also face the waste block. This eliminates the need to hand sand it round. I often follow this up by sanding the face with a thickness sander wrapped with abrasive paper. With one side face off flat, repeat the process for the second side of the disc.

Figure 3-20: Removing the waste from the waste block

You can easily remove the ring from the plywood waste block by using a chisel at the glue line. You could also try using double-sided tape instead of the hot glue. This will work best if you use corn-based tape. Conserve the ring for all the rings you have glued up.

A better method would be to sand the two faces with a disc sander, although it will be too likely the faces will be parallel to each other, which will be important later when gluing off individual rings.
